## PAPER - 5 : ADVANCED MANAGEMENT ACCOUNTING

## QUESTIONS

## Break-even Point (Batches)

1. DRB Ltd. is a leading Home Appliances manufacturer. The company uses just-in- time manufacturing process, thereby having no inventory. Manufacturing is done in batch size of 100 units which cannot be altered without significant cost implications. Although the products are manufactured in batches of 100 units, they are sold as single units at the market price. Due to fierce competition in the market, the company is forced to follow market price of each product. The following table provides the financial results of its four unique products:

|  | $\mathrm{D}_{1}$ | $\mathrm{D}_{2}$ | $\mathrm{D}_{3}$ | $\mathrm{D}_{4}$ | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Sales (units) | 2,00,000 | 2,60,000 | 1,60,000 | 3,00,000 |  |
|  | (₹) | (₹) | (₹) | (₹) | (₹) |
| Revenue | 26,00,000 | 45,20,000 | 42,40,000 | 32,00,000 | 145,60,000 |
| Less: Material Cost | 6,00,000 | 18,20,000 | 18,80,000 | 10,00,000 | 53,00,000 |
| Less: Labour Cost | 8,00,000 | 20,80,000 | 12,80,000 | 12,00,000 | 53,60,000 |
| Less: Overheads | 8,00,000 | 7,80,000 | 3,20,000 | 12,00,000 | 31,00,000 |
| Profit / (Loss) | 4,00,000 | $(1,60,000)$ | 7,60,000 | $(2,00,000)$ | 8,00,000 |

Since, company is concerned about loss in manufacturing and selling of two products so, it has approached you to clear picture on its products and costs. You have conducted a detailed investigation whose findings are below:
The overhead absorption rate of ₹2 per machine hour has been used to allocate overheads into the above product costs. Further analysis of the overhead cost shows that some of it is caused by the number of machine hours used, some is caused by the number of batches produced and some are product specific fixed overheads that would be avoided if the product were discontinued. Other general fixed overhead costs would be avoided only by the closure of the factory. Numeric details are summarized below:

Machine hour related......................................................................6,20,000
Batch related. 4,60,000
Product specific fixed overhead:

| $\mathrm{D}_{1} \ldots$ | 10,00,000 |  |
| :---: | :---: | :---: |
| $\mathrm{D}_{2}$ | ..1,00,000 |  |
| $\mathrm{D}_{3}$. | 2,00,000 |  |
| $\mathrm{D}_{4}$. | .1,00,000 | 14,00,000 |
| eneral fixed overheads. |  | 6,20,000 |
|  |  | 31,00,000 |

The other information is as follows:-

|  | $\mathbf{D}_{\mathbf{1}}$ | $\mathbf{D}_{\mathbf{2}}$ | $\mathbf{D}_{\mathbf{3}}$ | $\mathbf{D}_{\mathbf{4}}$ |  |  | Total |
| :--- | ---: | ---: | ---: | ---: | ---: | :---: | :---: |
| Machine Hours | $4,00,000$ | $3,90,000$ | $1,60,000$ | $6,00,000$ | $15,50,000$ |  |  |
| Labour Hours | $1,00,000$ | $2,60,000$ | $1,60,000$ | $1,50,000$ | $6,70,000$ |  |  |

## Required

(i) Prepare a profitability statement that is more useful for decision making than the profit statement prepared by DRB Ltd.
(ii) Calculate the break-even volume in batches and also in approximate units for Product ' $\mathrm{D}_{1}$.

## Pareto Analysis

2. The following information is given about the type of defects during a production period and the frequencies of their occurrence in a spectacle manufacturing company:

| Defect | No. of items |
| :--- | :---: |
| End Frame not equidistant from the centre | 10 |
| Non-uniform grinding of lenses | 60 |
| Power mismatches | 20 |
| Scratches on the surface | 110 |
| Spots / Stains on lenses | 5 |
| Rough edges of lenses | 70 |
| Frame colours-shade differences | 25 |

## Required

Construct a frequency table so that a Pareto Chart can be constructed for the defect type. Which areas should the company focus on?

## Flexible Budget

3. XEH Ltd. Had prepared fixed and flexible budget for the financial year 2019-20 as under:

| Fixed Budget for <br> capacity foll |  |  |  |  |  | Flexible <br> level | Budget for 75\% <br> (₹) |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sales | $13,50,000$ | $10,12,500$ |  |  |  |  |  |
| Direct Material | $4,25,000$ | $3,18,750$ |  |  |  |  |  |
| Direct Labour | $1,85,000$ | $1,38,750$ |  |  |  |  |  |
| Variable Overheads | $2,15,000$ | $1,61,250$ |  |  |  |  |  |
| Semi-Variable Overheads | $3,65,000$ | $3,23,750$ |  |  |  |  |  |
| Profit | $1,60,000$ | 70,000 |  |  |  |  |  |

After the closing of the financial year 2019-20, total actual sales stood at ₹ $11,07,000$ and there was a favourable sales price variance of ₹ 17,000 (F).

## Required

Prepare a flexible budget for the actual level of sales.

## Decision Making

4. A company manufactures three components, $\mathrm{A}, \mathrm{B}$ and C . these components pass through machines $P$ and $Q$. The machine hour capacity of $Q$ is limited to 7,800 hours a month. The company is interested in fulfilling the market demand to retain its market share. The following information is given:

|  | A |  |  | B |  | C |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| Demand (units/ month) | 1,200 | 1,200 | 1,500 |  |  |  |
| Variable cost (₹ / unit) | 187 | 215 | 111 |  |  |  |
| Fixed cost (₹/ unit) (at normal capacity utilization) |  | 115 | 115 | 55 |  |  |
| Hours per unit | P | 2 | 2 | $11 / 2$ |  |  |
|  | Q | 3 | 3 | 1 |  |  |

Component B has to be made by the company. There is a supplier available for components A and C at $₹ 280$ and $₹ 161$ per unit respectively.

## Required

(i) Which component(s) and in what quantities should be purchased to minimize costs?
(ii) From a financial perspective, what do you need to ensure in order to justify your answer in (i) above?

## Standard Costing

5. Sapporo Manufacturing Co . (SMC) is a leading consumer goods company. The budgeted and actual data of SMC for the year 2019-20 are as follows:-

| Particulars | Budget | Actual | Variance |
| :--- | ---: | ---: | ---: |
| Sales / Production (units) | $2,00,000$ | $1,65,000$ | $(35,000)$ |
| Sales (₹) | $21,00,000$ | $16,92,900$ | $(4,07,100)$ |
| Less: Variable Costs (₹) | $12,66,000$ | $10,74,150$ | $1,91,850$ |
| Less: Fixed Costs (₹) | $3,15,000$ | $3,30,000$ | $(15,000)$ |
| Profit | $5,19,000$ | $2,88,750$ | $(2,30,250)$ |

The budgeted data shown in the table is based on the assumption that total market size would be $4,00,000$ units but it turned out to be $3,75,000$ units.

## Required

Prepare a statement showing reconciliation of budget profit to actual profit through marginal costing approach for the year 2019-20 in as much detail as possible.

## Cost Plus Pricing

6. The budgeted cost data of a product manufactured by XYZ Co . Ltd. is furnished as below:

| Budgeted units to be produced | $2,00,000$ |
| :--- | :--- |
| Variable cost $(₹)$ | 32 per unit |
| Fixed cost $(₹)$ | 16 lacs |

It is proposed to adopt cost plus pricing approach with a mark-up of $25 \%$ on full budgeted cost basis.
However, research by the marketing department indicates that demand of the product in the market is price sensitive. The likely market responses are as follows:

| Selling price (₹ per unit) | 44 | 48 | 50 | 56 | 60 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Annual Demand (units) | $1,68,000$ | $1,52,000$ | $1,40,000$ | $1,28,000$ | $1,08,000$ |

## Required

Analyse the above situation and determine the best course of action.

## Linear Programming

7. The manufacturing company has 100 kg of $\mathrm{A}, 180 \mathrm{~kg}$ of B and 120 kg of C ingredients available per month. Company can use these materials to make three basic products namely $5-10-5,5-5-10$ and $20-5-10$, where the numbers in each case represent the percentage of weight of $\mathrm{A}, \mathrm{B}$ and C respectively in each of products. The cost of these raw materials are as follows:

| Ingredient | Cost per Kg. (₹) |
| :---: | :---: |
| A | 64 |
| B | 16 |
| C | 40 |
| Inert Ingredients | 16 |

Selling price of these products are ₹ 32.60 , ₹ 34.80 , and ₹ 36.00 per Kg , respectively. There is capacity restriction of the company product 5-10-5, so that company cannot produce more than 30 Kg per month.

## Required

Formulate this problem as an LP model to determine the productions (in Kg .) of each product which will maximise its monthly profit.
Note: Formulate Only

## Transportation Problem

8. Coupers Partners a leading CA firm has three managers. Each manager can work up to 176 hours during the next month, during which time three assignments must be completed. Tax Accounting (TA) Assignment will take 143 hours, Tax Performance Advisory (TPA) will take 154 hours, and Global Compliance \& Reporting (GCR) will take 176 hours. The amount per hour that can be billed for assigning each manager to each assignment is given below:

| Manager | Assignment <br> TA <br> $(₹)$ |  |  |
| :---: | :---: | :---: | :---: |
|  | 1,800 | (FA <br> (₹) | GCR <br> $(₹)$ |
|  | 2,100 | 2,250 | 2,850 |
| $\mathbf{C}_{3}$ | 2,400 | 1,950 | 1,800 |

## Required

Formulate this as a transportation problem and find the optimal solution. Also find out the maximum total billings during the next month.
Note: A manager may be involved in more than one assignment.

## Transfer Pricing

9. AWB Ltd. has two divisions Division W and Division B. Division W produces product Z, which it sells to external market and also to Division B. Divisions in the AWB Ltd. are treated as profit centres and divisions are given autonomy to set transfer prices and to choose their supplier. Performance of each division measured on the basis of target profit given for each period.

Division $W$ can produce $1,00,000$ units of product $Z$ at full capacity. Demand for product $Z$ in the external market is for 70,000 units only at selling price of $₹ 2,500$ per unit. To produce product $Z$ Division $W$ incurs $₹ 1,600$ as variable cost per unit and total fixed overhead of $₹ 4,00,00,000$. Division W has employed ₹ $12,00,00,000$ as working capital, working capital is financed by cash credit facility provided by its lender bank @ 11.50\% p.a. Division W has been given a profit target of $₹ 2,50,00,000$ for the year.
Division B has found two other suppliers C Ltd and H Ltd. who are agreed to supply product Z.

Division $B$ has requested a quotation for 40,000 units of product $Z$ from Division $W$.

## Required

(i) Calculate the transfer price per unit of product $Z$ that Division $W$ should quote in order to meet target profit for the year.
(ii) Calculate the two prices Division W would have to quote to Division B , if it became AWB Ltd. policy to quote transfer prices based on opportunity costs.

## Simulation

10. Finance Controller of Dunk Limited has drawn the following projections with probability distribution:

| Raw Material |  |  <br> Other Variable <br> Overheads |  | Sales |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $₹$ in 000 | Probability | $₹$ in 000 | Probability | $₹$ in 000 | Probability |
| $08-10$ | 0.2 | $11-13$ | 0.3 | $34-38$ | 0.1 |
| $10-12$ | 0.3 | $13-15$ | 0.5 | $38-42$ | 0.3 |
| $12-14$ | 0.3 | $15-17$ | 0.2 | $42-46$ | 0.4 |
| $14-16$ | 0.2 |  |  | $46-50$ | 0.2 |

Opening cash balance is $₹ 40,000$ and fixed cost is estimated at $₹ 15,000$ per month.

## Required

Simulate cash flow projection and expected cash balance at the end of the sixth month. Use the following single digit random numbers.

| Raw Material | 431046 |
| :--- | :--- |
| Wages \& Other Variable Overheads | 279189 |
| Sales | 066028 |

## Balanced Scorecard

11. "Hard Rock Coconut" is an exclusive resort located in a famous Island of Pacific Ocean that vows to isolate its guests from the hustle and bustle of everyday life. Its leading principle is "all contemporary amenity wrapped in old-world charisma". Each of the resort's 18 villas has a separate theme like Castle, Majestic, Ambassador, Royal Chateau, Coconut, Lemon, Balinese etc and guests often ask for a specific villa when they make reservations. Villas are Ideal for families or friends travelling together and these villas feature luxurious accommodation spanning two floors. Since it is located within a 300 -acre estate on white sand beach, the resort offers its guests a wide variety of outdoor activities such as horseback riding, hiking, diving, snorkeling, sailing, golf and so on. Guests could also while away the day relaxing in the pool and availing themselves of the resort's worldfamous spa "Hard Coco Spa". The dining room, which only has three tables for the public, is acceptable proud of its 4 -star rating.

## Required

Develop a Balanced Scorecard for "Hard Rock Coconut". It is sufficient to give two measures in each of the four perspectives.

## Learning Curve

12. Marketing manager of AV Ltd. has conducted a market research on the price-demand relationship for its consumer durable product ' $\mathrm{K}-2$ '. K-2 is a recently launched product. The price-demand pattern will be as follows:

| Price per unit (₹) | Demand (units) |
| :---: | :---: |
| 11,100 | 1,000 |
| 10,700 | 2,000 |
| 9,600 | 3,000 |
| 8,700 | 4,000 |

K-2 is produced in batches of 1,000 units. Production manager of AV Ltd. has also researched and studied the production pattern and has believe that $50 \%$ of the variable manufacturing cost would have learning and experience curve effect. This learning \& experience curve effect will be continued upto 4,000 units of production at a constant rate. But after 4,000 units of production, unit variable manufacturing cost would be equal to the unit cost at the $4^{\text {th }}$ batch. The manufacturing unit cost of the first batch will be ₹ 4,400 of which only $50 \%$ is subjected to learning and experience curve effect. The average unit variable cost of all 4 batches will be ₹ 4,120 .

## Required

(i) Calculate the rate of learning that has been expected by the Production manager.
(ii) Calculate the price at which AV Ltd. should sell the K-2 in order to maximise its contribution.

Note
$\log 0.93=-0.0315, \log 2=0.3010,2^{-0.1047}=0.9299,3^{-0.1047}=0.8913,4^{-0.1047}=0.8649$

## Target Costing

13. A toy company ' $T$ ' expects to successfully launch Toy $Z$ based on a film character. T must pay $15 \%$ royalty on the selling price to the film company. ' $T$ ' targets a selling price of ₹ 100 per toy and profit of $25 \%$ selling price.

The following are the cost data forecast:

|  |  |
| :--- | :---: |
| Component A | 8.50 |
| Component B | 7.00 |
| Labour: 0.4 hr. @ ₹ 60 per hr | 24.00 |
| Product specific overheads | 13.50 |

In addition, each toy requires 0.6 kg of other materials, which are supplied at a cost of ₹ 16 per kg with a normal $4 \%$ substandard quality which is not usable in the manufacture.

## Required

Determine if the above cost structure is within the target cost. If not, what should be the extent of cost reduction?

## Cost Classification

14. ANZB Financial Services Limited is an Indian banking and financial services company headquartered in Chennai, Tamil Nadu. Apart from lending to individuals, the company grants loans to micro, small and medium business enterprises. Listed below are several costs incurred in the Ioan division of ANZB Financial Services Limited.
(i) Remuneration of the loan division manager.
(ii) Cost of Printer Paper, File Folders, View Binders, Ink, Toner \& Ribbons used in the loan division.
(iii) Cost of the division's MacBook Pro purchased by the loan division manager last year.
(iv) Cost of advertising in business newspaper by the bank, which is allocated to the loan division.

Cost Classification

| Controllable by the loan division <br> manager | Direct cost of the loan <br> division | Sunk Cost |
| :--- | :--- | :--- |
| Uncontrollable by the loan <br> division manager | Indirect Cost of the loan <br> division | Out of Pocket <br> Cost |

## Required

For each Cost, indicate which of the above mentioned Cost Classification best describe the cost.

Note- More than one classification may apply to the same cost item.

## SUGGESTED ANSWERS

1. (i) Statement of Profitability of DRB Ltd

|  | Products (Amount in ₹) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathrm{D}_{1}$ | $\mathrm{D}_{2}$ | $\mathrm{D}_{3}$ | $\mathrm{D}_{4}$ | Total |
| Sales | 26,00,000 | 45,20,000 | 42,40,000 | 32,00,000 | 1,45,60,000 |
| Direct Materials | 6,00,000 | 18,20,000 | 18,80,000 | 10,00,000 | 53,00,000 |
| Direct Wages | 8,00,000 | 20,80,000 | 12,80,000 | 12,00,000 | 53,60,000 |
| Overheads (W.N.2): |  |  |  |  |  |
| Machine Related | 1,60,000 | 1,56,000 | 64,000 | 2,40,000 | 6,20,000 |
| Batch Related | 1,00,000 | 1,30,000 | 80,000 | 1,50,000 | 4,60,000 |
| Contribution | 9,40,000 | 3,34,000 | 9,36,000 | 6,10,000 | 28,20,000 |
| Product Specific <br> Fixed Overheads | 10,00,000 | 1,00,000 | 2,00,000 | 1,00,000 | 14,00,000 |
| Gross Profit | $(60,000)$ | 2,34,000 | 7,36,000 | 5,10,000 | 14,20,000 |
| General Fixed Overheads |  |  |  |  | 6,20,000 |
| Profit |  |  |  |  | 8,00,000 |

(ii) Break-even Point

| Total Sale Value of Product ' $D_{1}$ ' | $=₹ 26,00,000$ |
| :--- | :--- |
| Total Contribution of Product $D_{1}$ ' | $=₹ 9,40,000$ |
| Specific Fixed Overheads (Product $D_{1}$ ) | $=₹ 10,00,000$ |

Break-even Sales (₹)
$=\frac{\text { Specific Fixed Cost }}{\text { Total Contribution }} \times$ Total Sales Value
$=\frac{₹ 10,00,000}{₹ 9,40,000} \times ₹ 26,00,000$
$=$ ₹27,65,957.45
$=\frac{₹ 27,65,957.45}{₹ 13.00}=2,12,766$ units

However, production must be done in batches of 100 units. Therefore, 2,128 batches are required for break even. Due to the production in batches, 34 units ( 2,128 batches $\times 100$ units $-2,12,766$ units) would be produced extra. These 34 units would add extra cost ₹ 282.20 ( 34 units $\times$ ₹ $8.3^{*}$ ). Accordingly, break-even units as calculated above will increase by 22 units $\left(\frac{₹ 282.20}{₹ 13.00}\right)$.
(*) $\quad\left(\frac{₹ 6,00,000+₹ 8,00,000+₹ 1,60,000+₹ 1,00,000}{2,00,000 \text { units }}\right)$
Break-even units of product ' $D_{1}$ ' is $2,12,788$ units ( $2,12,766$ units +22 units).

## Workings

W.N.-1

## Calculation Showing Overhead Rates

| Overhead's Related <br> Factors | Overhead <br> Cost (₹) <br> $[\mathrm{a}]$ | Total No. of <br> Units of Factors <br> [b] | Overhead Rate <br> $(₹)$ <br> $[\mathrm{a}] /[\mathrm{b}]$ |
| :--- | :---: | :---: | :---: |
| Machining Hours | $6,20,000$ | $15,50,000$ hrs. | 0.40 |
| Batch Production | $4,60,000$ | 9,200 batches | 50.00 |

## W.N.-2

Statement Showing - Overhead Costs Related to Product

| Particulars | $\mathrm{D}_{1}$ | $\mathrm{D}_{2}$ | $\mathrm{D}_{3}$ | $\mathrm{D}_{4}$ |
| :---: | :---: | :---: | :---: | :---: |
| Machining hrs. related overheads | $\begin{aligned} & \text { ₹ } 1,60,000 \\ & (4,00,000 \mathrm{hrs} \\ & \times ₹ 0,40) \end{aligned}$ | $\begin{gathered} ₹ 1,56,000 \\ (3,90,000 \mathrm{hrs} \\ \times ₹ 0.40) \end{gathered}$ | $\begin{gathered} ₹ 64,000 \\ (1,60,000 \mathrm{hrs} \times \\ ₹ 0.40) \end{gathered}$ | $\begin{gathered} \text { ₹ } 2,40,000 \\ (6,00,000 \text { hrs } \times \\ ₹ 0.40) \end{gathered}$ |
| Batch related overheads | $\begin{gathered} ₹ 1,00,000 \\ (2,000 \text { batches } \\ \times ₹ 50) \end{gathered}$ | $\begin{gathered} ₹ 1,30,000 \\ (2,600 \text { batches } \\ \times ₹ 50) \end{gathered}$ | $\begin{gathered} \text { ₹ } 80,000 \\ (1,600 \text { batches } \\ \times ₹ 50) \end{gathered}$ | $\begin{gathered} ₹ 1,50,000 \\ (3,000 \text { batches } \\ \times ₹ 50) \end{gathered}$ |

2. 

Statement Showing "Pareto Analysis of Defects"

| Defect Type | No. of Items | \% of Total <br> Items | Cumulative <br> Total |
| :--- | :---: | :---: | :---: |
| Scratches on the surface | 110 | $36.67 \%$ | $36.67 \%$ |
| Rough edges of lenses | 70 | $23.33 \%$ | $60.00 \%$ |
| Non-uniform grinding of lenses | 60 | $20.00 \%$ | $80.00 \%$ |
| Frame colours-shade differences | 25 | $8.33 \%$ | $88.33 \%$ |
| Power mismatches | 20 | $6.67 \%$ | $95.00 \%$ |
| End frame not equidistant from the <br> centre | 10 | $3.33 \%$ | $98.33 \%$ |
| Spots/ Strain on lenses | 5 | $1.67 \%$ | $100.00 \%$ |
|  | 300 | $100.00 \%$ |  |

The company should focus on eliminating scratches on the surface, rough edges of lenses and grinding of lenses related defects which constitute $80 \%$ portion, according to Pareto Theory.

## 3. Working Notes

(1) Calculation of Actual Sales at Budgeted Prices

|  | (₹) |
| :--- | ---: |
| Actual Sales at Actual Price | $11,07,000$ |
| Less: Sales Price Variance (F) | 17,000 |
| Actual Sales at Budgeted Prices | $10,90,000$ |

$$
\begin{aligned}
\text { Activity Level } & =\frac{\text { ActualSalesatBud }}{\text { BudgetedSales at }} \\
& =\frac{₹ 10,90,000}{₹ 13,50,000} \times 100 \\
& =80.74 \ldots \%
\end{aligned}
$$

(2) Segregation of Fixed \& Variable Cost Element from Semi-Variable Overheads

| Variable Overhead | $=\frac{\text { Overheadat Full Capacity-Overhead at 75\% Capacity }}{\text { DifferenceinActivity Level }}$ |
| ---: | :--- |
|  | $=\frac{₹ 3,65,000-₹ 3,23,750}{25}$ |
|  | $=₹ 1,650$ |
| Fixed Overhead | $=$ Total SV Overheads at $100 \%$ Level - Variable |
|  | $=₹ 3,65,000-(₹ 1,650 \times 100)$ |
|  | $=₹ 2,00,000$ |

Flexible Budget at $80.74 \%$ Activity Level

|  | (Amount in ₹) |
| :--- | ---: |
| Sales | $10,90,000$ |
| Less: |  |
| Direct Material $(₹ 4,25,000 \times 80.74 . . \%)$ | $3,43,148$ |
| Direct Labour $(₹ 1,85,000 \times 80.74 . . \%)$ | $1,49,370$ |
| Variable Overheads $(₹ 2,15,000 \times 80.74 . . \%)$ | $1,73,593$ |
| Semi-Variable Overheads |  |

| Variable Cost (₹1,650 $\times 80.74 .$.$) [W.N.-2]$ | $1,33,222$ |
| :--- | ---: |

| Standard Variable Cost per unit | $=₹ 6.33$ |
|  | $=\frac{₹ 10,74,150}{₹ 1,65,000}$ |
| Actual Variable Cost per unit | $=₹ 6.51$ |

Calculation of Variances

Sales Variances:

| Volume Contribution Planning* $=$ | Budgeted Market Share $\% \times$ (Actual Industry <br> Sales Quantity in units - Budgeted Industry Sales <br> Quantity in units) <br>  <br> Contribution per unit) |
| ---: | :--- |
| $=$ | (Average Budgeted |

(*) Market Size Variance
Volume Contribution Operational** $=$ (Actual Market Share \% - Budgeted Market Share \%) $\times$ (Actual Industry Sales Quantity in units) $\times($ Average Budgeted Contribution per unit)
$=(44 \%-50 \%) \times 3,75,000$ units $\times ₹ 4.17$
$=93,825(\mathrm{~A})$
(**) Market Share Variance

Price $\quad$| $=$ | Actual Sales - Standard Sales |
| ---: | :--- |
| $=$ | Actual Sales Quantity $\times$ (Actual Price - Budgeted |
|  | Price $)$ |
| $=$ | $1,65,000$ units $\times(₹ 10.26-₹ 10.50)=39,600$ (A) |

Variable Cost Variances:
Cost $=$ Standard Cost for Production - Actual Cost
$=$ Actual Production $\times$ (Standard Cost per unit Actual Cost per unit)
$=1,65,000$ units $\times$ ( $₹ 6.33-₹ 6.51$ )
$=₹ 29,700(\mathrm{~A})$
Fixed Cost Variances:
Expenditure $\quad=$ Budgeted Fixed Cost - Actual Fixed Cost
$=$ ₹ $3,15,000-₹ 3,30,000$
$=₹ 15,000(\mathrm{~A})$
雨

Fixed Overhead Volume Variance does not arise in a Marginal Costing system

## 6. Analysis of Cost plus Pricing Approach

The company has a plan to produce $2,00,000$ units and it proposed to adopt Cost plus Pricing approach with a markup of $25 \%$ on full budgeted cost. To achieve this pricing policy, the company has to sell its product at the price calculated below:

| Qty. | $2,00,000$ units |
| :--- | ---: |
| Variable Cost (2,00,000 units × ₹ 32) | $64,00,000$ |
| Add: Fixed Cost | $16,00,000$ |
| Total Budgeted Cost | $80,00,000$ |
| Add: Profit (25\% of ₹ $80,00,000$ ) | $20,00,000$ |
| Revenue (need to earn) | $1,00,00,000$ |
| Selling Price per unit $\left(\frac{₹ 1,00,00,000}{2,00,000 \text { units }}\right)$ | 50 p.u. |

However, at selling price ₹ 50 per unit, the company can sell 1,40,000 units only, which is 60,000 units less than the budgeted production units.
After analyzing the price-demand pattern in the market (which is price sensitive), to sell all the budgeted units market price needs to be further lowered, which might be lower than the total cost of production.

Statement Showing "Profit at Different Demand \& Price Levels"

| I |  |  |  | II | III |
| :--- | :---: | :---: | :---: | :---: | :---: |
| IV | Budgeted |  |  |  |  |
| Qty. (units) | $1,68,000$ | $1,52,000$ | $1,40,000$ | $1,28,000$ | $1,08,000$ |
|  | $₹$ | $₹$ | $₹$ | $₹$ | $₹$ |
| Sales | $73,92,000$ | $72,96,000$ | $70,00,000$ | $71,68,000$ | $64,80,000$ |
| Less: Variable Cost | $53,76,000$ | $48,64,000$ | $44,80,000$ | $40,96,000$ | $34,56,000$ |
| Total Contribution | $20,16,000$ | $24,32,000$ | $25,20,000$ | $30,72,000$ | $30,24,000$ |
| Less: Fixed Cost | $16,00,000$ | $16,00,000$ | $16,00,000$ | $16,00,000$ | $16,00,000$ |
| Profit (₹) | $4,16,000$ | $8,32,000$ | $9,20,000$ | $14,72,000$ | $14,24,000$ |
| Profit <br> (\% on total cost) | 5.96 | 12.87 | 15.13 | $25.84 \%$ | $28.16 \%$ |

## Determination of the Best Course of Action

(i) Taking the above calculation and analysis into account, the company should produce and sell $1,28,000$ units at ₹ 56 . At this price company will not only be able to achieve its desired mark up of $25 \%$ on the total cost but can earn maximum contribution as compared to other even higher selling price.
(ii) If the company wants to uphold its proposed pricing approach with the budgeted quantity, it should try to reduce its variable cost per unit for example by asking its supplier to provide a quantity discount on the materials purchased.
7. Let the $P_{1}, P_{2}$ and $P_{3}$ be the three products to be manufactured. Then the data are as follows:

| Products | Product ingredients |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | A | B | C | Inert Ingredients |
| $\mathrm{P}_{1}$ | $5 \%$ | $10 \%$ | $5 \%$ | $80 \%$ |
| $\mathrm{P}_{2}$ | $5 \%$ | $5 \%$ | $10 \%$ | $80 \%$ |
| $\mathrm{P}_{3}$ | $20 \%$ | $5 \%$ | $10 \%$ | $65 \%$ |
| Cost per kg (₹) | 64 | 16 | 40 | 16 |

Cost of Product $\mathrm{P}_{1}$
$=5 \% \times ₹ 64+10 \% \times ₹ 16+5 \% \times ₹ 40+80 \% \times ₹ 16$
$=₹ 19.60$ per kg

## Cost of Product P2

$=5 \% \times ₹ 64+5 \% \times ₹ 16+10 \% \times ₹ 40+80 \% \times ₹ 16$
$=₹ 20.80$ per kg.

## Cost of Product P3

$=20 \% \times ₹ 64+5 \% \times ₹ 16+10 \% \times ₹ 40+65 \% \times ₹ 16$
$=₹ 28.00$ per kg.
Let $\mathrm{x}_{1}, \mathrm{x}_{2}$, and $\mathrm{x}_{3}$ be the quantity (in kg ) of $\mathrm{P}_{1}, \mathrm{P}_{2}$, and P 3 respectively to be manufactured. The LP problem can be formulated:
Objective function:

$$
\begin{aligned}
\text { Maximise } Z & =(\text { Selling Price }- \text { Cost Price) } \times \text { Quantity of Product } \\
& =(₹ 32.60-₹ 19.60) x_{1}+(₹ 34.80-₹ 20.80) x_{2}+(₹ 36.00-₹ 28) x_{3} \\
& =13 x_{1}+14 x_{2}+8 x_{3}
\end{aligned}
$$

Subject to Constraints:

$$
\begin{aligned}
1 / 20 x_{1}+1 / 20 x_{2}+1 / 5 x_{3} & \leq 100 \\
\text { Or } x_{1}+x_{2}+4 x_{3} & \leq 2,000 \\
1 / 10 x_{1}+1 / 20 x_{2}+1 / 20 x_{3} & \leq 180 \\
\text { Or } 2 x_{1}+x_{2}+x_{3} & \leq 3,600 \\
1 / 20 x_{1}+1 / 10 x_{2}+1 / 10 x_{3} & \leq 120
\end{aligned}
$$

Or $\quad$| $\mathrm{x}_{1}+2 \mathrm{x}_{2}+2 \mathrm{x}_{3}$ | $\leq 2,400$ |
| ---: | :--- |
| $\mathrm{x}_{1}$ | $\leq 30$ |
| and | $\mathrm{x}_{1}, \mathrm{x}_{2}, \mathrm{x}_{3}$ |

8. The given information can be tabulated in following transportation problem-

| Manager | Assignment |  |  | Time <br> Available <br> (Hours) |
| :---: | :---: | :---: | :---: | :---: |
|  | TA <br> $(₹)$ | TPA <br> $(₹)$ | GCR <br> $(₹)$ | (₹) |
| $\mathbf{C}_{1}$ | 1,800 | 2,250 | 2,850 | 176 |
| $\mathbf{C}_{2}$ | 2,100 | 1,950 | 1,800 | 176 |
| $\mathbf{C}_{3}$ | 2,400 | 2,100 | 2,250 | 176 |
| Time Required <br> (Hours) | 143 | 154 | 176 |  |

The given problem is an unbalanced transportation problem. Introducing a dummy assignment to balance it, we get-

| Manager | Assignment |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | TA <br> $(₹)$ | TPA <br> $(₹)$ | GCR <br> $(₹)$ | Dummy <br> $(₹)$ | Available <br> (Hours) |
| $\mathbf{C}_{1}$ | 1,800 | 2,250 | 2,850 | 0 | 176 |
| $\mathbf{C}_{2}$ | 2,100 | 1,950 | 1,800 | 0 | 176 |
| $\mathbf{C}_{3}$ | 2,400 | 2,100 | 2,250 | 0 | 176 |
| Time Required <br> (Hours) | 143 | 154 | 176 | 55 | 528 |

The objective here is to maximize total billing amount of the auditors. For achieving this objective, let us convert this maximization problem into a minimization problem by subtracting all the elements of the above payoff matrix from the highest payoff i.e. ₹2,850.

| Manager | Assignment |  |  |  | Time <br> TPA |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | TA <br> $(₹)$ | TPA <br> $(₹)$ | GCR <br> $(₹)$ | Dummy <br> $(₹)$ | Available <br> (Hours) |
| $\mathbf{C}_{1}$ | 1,050 | 600 | 0 | 2,850 | 176 |
| $\mathbf{C}_{2}$ | 750 | 900 | 1,050 | 2,850 | 176 |
| $\mathbf{C}_{3}$ | 450 | 750 | 600 | 2,850 | 176 |
| Time Required <br> (Hours) | 143 | 154 | 176 | 55 | 528 |

Now, let us apply VAM method to the above matrix for finding the initial feasible solution.

| Manager | Assignment |  |  |  | Time <br> Avail. <br> (Hours) $176 / 0$ | Difference |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | TA <br> (₹) | TPA <br> (₹) | GCR <br> (₹) | Dummy (₹) |  |  |
| $\mathrm{C}_{1}$ | 1,050 | 600 | 0176 | 2,850 |  | 600-- |
| $\mathrm{C}_{2}$ | 750 | 900121 | 1,050 | 2,850 55 | 176/55/0 | 150, 150 1,950 |
| $\mathrm{C}_{3}$ | $4 5 0 \longdiv { 1 4 3 }$ | 75033 | 600 | 2,850 | 176/33/0 | 150, 300, 2,100 |
| Time <br> Required | 143/0 | 154/121/0 | 176/0 | 55/0 | 528 |  |
|  | 300 | 150 | 600 | 0 |  |  |
|  | 300 | 150 | -- | 0 |  |  |
|  | - | 150 | - | 0 |  |  |

The initial solution is given below. It can be seen that it is a degenerate solution since the number of allocation is 5 . In order to apply optimality test, the total number of allocations should be $6(m+n-1)$. To make the initial solution a non-degenerate, we introduce a very small quantity in the least cost independent cell which is cell of $\mathrm{C}_{3}, G C R$.

| Manager | Assignment |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | TA <br> (₹) | TPA <br> (₹) | GCR <br> (₹) | Dummy <br> (₹) |
| $\mathrm{C}_{1}$ | 1,050 | 600 | 076 | 2,850 |
| $\mathrm{C}_{2}$ | 750 | 900121 | 1,050 | 2,850 55 |
| $\mathrm{C}_{3}$ | 450143 | 75033 | 600 e | 2,850 |

Let us test the above solution for optimality-
$\left(u_{i}+v_{j}\right)$ Matrix for Allocated / Unallocated Cells

|  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| -150 | 150 | 0 | 2,100 | $u_{i}$ |
| -600 |  |  |  |  |

|  | 600 | 900 | 750 | 2,850 | 150 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 450 | 750 | 600 | 2,700 | 0 |
| $\mathrm{v}_{\mathrm{j}}$ | 450 | 750 | 600 | 2,700 |  |

Now we calculate $\Delta_{\mathrm{ij}}=\mathrm{C}_{\mathrm{ij}}-\left(\mathrm{u}_{\mathrm{i}}+\mathrm{v}_{\mathrm{j}}\right)$ for non basic cells which are given in the table below-
$\Delta \Delta_{\mathrm{ij}}$ Matrix

|  |  |  |  |
| :---: | :---: | :---: | :---: |
| 1,200 | 450 |  | 750 |
| 150 |  | 300 |  |
|  |  |  | 150 |

Since, all allocations in $\Delta_{i j}=C_{i j}-\left(u_{i}+v_{j}\right)$ are non negative, the allocation is optimal. The allocation of assignments to managers and their billing amount is given below:

| Manager | Assignment | Billing Amount |
| :---: | :--- | ---: |
| $\mathbf{C}_{1}$ | Global Compliance \& Reporting (GCR) | $₹ 5,01,600$ <br> $(176$ hrs. $\times ₹ 2,850)$ |
| $\mathbf{C}_{2}$ | Tax Performance Advisory (TPA) | ₹2,35,950 <br> $(121$ hrs. $\times ₹ 1,950)$ |
| $\mathbf{C}_{3}$ | Tax Accounting (TA) | $₹ 3,43,200$ <br> $(143$ hrs. $\times ₹ 2,400)$ |
| $\mathbf{C}_{3}$ | Tax Performance Advisory (TPA) | $₹ 69,300$ |
|  |  | Total Billing |
|  | $(33$ hrs. $\times ₹ 2,100)$ |  |
|  | ₹11,50,050 |  |

9. (i) Transfer Price per unit of Product $Z$ that Division W Should Quote in order to meet Target Profit
Quotation for the 40,000 units of product $Z$ should be such that meet Division W's target profit and interest cost on working capital. Therefore the minimum quote for product $Z$ will be calculated as follows:

| Particulars | Amount (₹) |
| :--- | ---: |
| Target Profit (given for the year) | $2,50,00,000$ |
| Add: Interest Cost on Working Capital (₹ $12,00,00,000 @ 11.5 \%)$ | $1,38,00,000$ |
| Required Profit | $3,88,00,000$ |
| Add: Fixed Overhead | $4,00,00,000$ |

| Target Contribution | $7,88,00,000$ |
| :--- | ---: |
| Less: Contribution Earned -- - External Sales <br> $\{60,000$ units $\times(₹ 2,500-₹ 1,600)\}$ | $5,40,00,000$ |
| Contribution Required - Internal Sales | $2,48,00,000$ |
| Contribution per unit of Product $Z(₹ 2,48,00,000 \div 40,000$ units) | 620 |
| Transfer Price of Product $Z$ to Division B <br> (Variable Cost per unit + Contribution per unit) | 2,220 |

## (ii) The Two Transfer Prices Based on Opportunity Costs

For the 30,000 units (i.e. maximum capacity - maximum external market demand) at variable cost of production i.e. ₹ 1,600 per unit.
For the next 10,000 units (i.e. external market demand - maximum possible sale) at market selling price i.e. ₹ 2,500 per unit.
10. Allocation of Random Numbers

| Raw Material |  |  |  <br> Other Variable <br> Overheads |  |  | Sales |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mid <br> Point | Cum. <br> Prob. | Random <br> Nos. | Mid <br> Point | Cum. <br> Prob. | Random. <br> Nos. | Mid <br> Point | Cum. <br> Prob. | Random <br> Nos. |
| 9 | 0.2 | $0-1$ | 12 | 0.3 | $0-2$ | 36 | 0.1 | 0 |
| 11 | 0.5 | $2-4$ | 14 | 0.8 | $3-7$ | 40 | 0.4 | $1-3$ |
| 13 | 0.8 | $5-7$ | 16 | 1.0 | $8-9$ | 44 | 0.8 | $4-7$ |
| 15 | 1.0 | $8-9$ |  |  |  | 48 | 1.0 | $8-9$ |
