

PAPER – 5 : ADVANCED MANAGEMENT ACCOUNTING

QUESTIONS

Limiting Factor

1. List out the basis for deciding the priority of selecting the best product in the different circumstances stated below:
 - (i) When maximum sales (in value) is a limiting factor.
 - (ii) When raw-material is a limiting factor.
 - (iii) When labour hour is a limiting factor.
 - (iv) When there is a heavy demand for the product.

Break-even Point (Batches)

2. DRB Ltd. is a leading Home Appliances manufacturer. The company uses just-in- time manufacturing process, thereby having no inventory. Manufacturing is done in batch size of 100 units which cannot be altered without significant cost implications. Although the products are manufactured in batches of 100 units, they are sold as single units at the market price. Due to fierce competition in the market, the company is forced to follow market price of each product. The following table provides the financial results of its four unique products:

	D ₁	D ₂	D ₃	D ₄	Total
Sales (units)	2,00,000	2,60,000	1,60,000	3,00,000	
	(₹)	(₹)	(₹)	(₹)	(₹)
Revenue	26,00,000	45,20,000	42,40,000	32,00,000	145,60,000
Less: Material Cost	6,00,000	18,20,000	18,80,000	10,00,000	53,00,000
Less: Labour Cost	8,00,000	20,80,000	12,80,000	12,00,000	53,60,000
Less: Overheads	8,00,000	7,80,000	3,20,000	12,00,000	31,00,000
Profit / (Loss)	4,00,000	(1,60,000)	7,60,000	(2,00,000)	8,00,000

Since, company is concerned about loss in manufacturing and selling of two products so, it has approached you to clear picture on its products and costs. You have conducted a detailed investigation whose findings are below:

The overhead absorption rate of ₹2 per machine hour has been used to allocate overheads into the above product costs. Further analysis of the overhead cost shows that some of it is caused by the number of machine hours used, some is caused by the number of batches produced and some are product specific fixed overheads that would be avoided if the product were discontinued. Other general fixed overhead costs would be avoided only by the closure of the factory. Numeric details are summarized below:

	₹	₹
Machine hour related.....		6,20,000
Batch related.....		4,60,000
Product specific fixed overhead:		
D ₁	10,00,000	
D ₂	1,00,000	
D ₃	2,00,000	
D ₄	<u>1,00,000</u>	14,00,000
General fixed overheads.....		<u>6,20,000</u>
		31,00,000

The other information is as follows:-

	D ₁	D ₂	D ₃	D ₄	Total
Machine Hours	4,00,000	3,90,000	1,60,000	6,00,000	15,50,000
Labour Hours	1,00,000	2,60,000	1,60,000	1,50,000	6,70,000

Required

- Prepare a profitability statement that is more useful for decision making than the profit statement prepared by DRB Ltd.
- Calculate the break-even volume in batches and also in approximate units for Product 'D₁'.

Flexible Budget

- XEH Ltd. Had prepared fixed and flexible budget for the financial year 2017-18 as under:

	Fixed Budget for full capacity (₹)	Flexible Budget for 75% level (₹)
Sales	13,50,000	10,12,500
Direct Material	4,25,000	3,18,750
Direct Labour	1,85,000	1,38,750
Variable Overheads	2,15,000	1,61,250
Semi-Variable Overheads	3,65,000	3,23,750
Profit	1,60,000	70,000

After the closing of the financial year 2017-18, total actual sales stood at ₹11,07,000 and there was a favourable sales price variance of ₹17,000 (F).

Required

Prepare a flexible budget for the actual level of sales.

Pareto Analysis

4. The following information is given about the type of defects during a production period and the frequencies of their occurrence in a spectacle manufacturing company:

Defect	No. of items
End Frame not equidistant from the centre	10
Non-uniform grinding of lenses	60
Power mismatches	20
Scratches on the surface	110
Spots / Stains on lenses	5
Rough edges of lenses	70
Frame colours-shade differences	25

Required

Construct a frequency table so that a Pareto Chart can be constructed for the defect type. Which areas should the company focus on?

Standard Costing

5. Sapporo Manufacturing Co. (SMC) is a leading consumer goods company. The budgeted and actual data of SMC for the year 2017-18 are as follows:-

Particulars	Budget	Actual	Variance
Sales / Production (units)	2,00,000	1,65,000	(35,000)
Sales (₹)	21,00,000	16,92,900	(4,07,100)
Less: Variable Costs (₹)	12,66,000	10,74,150	1,91,850
Less: Fixed Costs (₹)	3,15,000	3,30,000	(15,000)
Profit	5,19,000	2,88,750	(2,30,250)

The budgeted data shown in the table is based on the assumption that total market size would be 4,00,000 units but it turned out to be 3,75,000 units.

Required

Prepare a statement showing reconciliation of budget profit to actual profit through marginal costing approach for the year 2017-18 in as much detail as possible.

Decision Making

6. A company manufactures three components, A, B and C. these components pass through machines P and Q. The machine hour capacity of Q is limited to 7,800 hours a month. The

company is interested in fulfilling the market demand to retain its market share. The following information is given:

	A	B	C
Demand (units/ month)	1,200	1,200	1,500
Variable cost (₹ / unit)	187	215	111
Fixed cost (₹/ unit) (at normal capacity utilization)	115	115	55
Hours per unit P	2	2	1½
Q	3	3	1

Component B has to be made by the company. There is a supplier available for components A and C at ₹ 280 and ₹ 161 per unit respectively.

Required

- Which component(s) and in what quantities should be purchased to minimize costs?
- From a financial perspective, what do you need to ensure in order to justify your answer in (i) above?

Cost Plus Pricing

7. The budgeted cost data of a product manufactured by XYZ Co. Ltd. is furnished as below:

Budgeted units to be produced	2,00,000
Variable cost (₹)	32 per unit
Fixed cost (₹)	16 lacs

It is proposed to adopt cost plus pricing approach with a mark-up of 25% on full budgeted cost basis.

However, research by the marketing department indicates that demand of the product in the market is price sensitive. The likely market responses are as follows:

Selling price (₹ per unit)	44	48	50	56	60
Annual Demand (units)	1,68,000	1,52,000	1,40,000	1,28,000	1,08,000

Required

Analyse the above situation and determine the best course of action.

Transfer Pricing

8. AWB Ltd. has two divisions Division W and Division B. Division W produces product Z, which it sells to external market and also to Division B. Divisions in the AWB Ltd. are treated as profit centres and divisions are given autonomy to set transfer prices and to choose their supplier. Performance of each division measured on the basis of target profit given for each period.

Division W can produce 1,00,000 units of product Z at full capacity. Demand for product Z in the external market is for 70,000 units only at selling price of ₹2,500 per unit. To produce product Z Division W incurs ₹1,600 as variable cost per unit and total fixed overhead of ₹4,00,00,000. Division W has employed ₹12,00,00,000 as working capital, working capital is financed by cash credit facility provided by its lender bank @ 11.50% p.a. Division W has been given a profit target of ₹2,50,00,000 for the year.

Division B has found two other suppliers C Ltd and H Ltd. who are agreed to supply product Z.

Division B has requested a quotation for 40,000 units of product Z from Division W.

Required

- (i) Calculate the transfer price per unit of product Z that Division W should quote in order to meet target profit for the year.
- (ii) Calculate the two prices Division W would have to quote to Division B, if it became AWB Ltd. policy to quote transfer prices based on opportunity costs.

Linear Programming

9. The manufacturing company has 100 kg of A, 180 kg of B and 120 kg of C ingredients available per month. Company can use these materials to make three basic products namely 5-10-5, 5-5-10 and 20-5-10, where the numbers in each case represent the percentage of weight of A, B and C respectively in each of products. The cost of these raw materials are as follows:

Ingredient	Cost per Kg. (₹)
A	64
B	16
C	40
Inert Ingredients	16

Selling price of these products are ₹32.60, ₹34.80, and ₹36.00 per Kg, respectively. There is capacity restriction of the company product 5-10-5, so that company cannot produce more than 30 Kg per month.

Required

Formulate this problem as an LP model to determine the productions (in Kg.) of each product which will maximise its monthly profit.

Note: Formulate Only

Transportation Problem

10. Coupers Partners a leading CA firm has three managers. Each manager can work up to 176 hours during the next month, during which time three assignments must be completed. Tax Accounting (TA) Assignment will take 143 hours, Tax Performance Advisory (TPA) will

take 154 hours, and Global Compliance & Reporting (GCR) will take 176 hours. The amount per hour that can be billed for assigning each manager to each assignment is given below:

Manager	Assignment		
	TA (₹)	TPA (₹)	GCR (₹)
C ₁	1,800	2,250	2,850
C ₂	2,100	1,950	1,800
C ₃	2,400	2,100	2,250

Required

Formulate this as a transportation problem and find the optimal solution. Also find out the maximum total billings during the next month.

Note: A manager may be involved in more than one assignment.

PERT and CPM

11. State the Validity of following statements along with the reasons:

- Two activities have common predecessor and successor activities. So, they can have common initial and final nodes.
- In respect of any activity whether real or dummy, the terminal node should bear a number higher than the initial node number.
- The difference between the latest event time and the earliest event time is termed as free float.
- For every critical activity in a network, the earliest start and the earliest finish time as well as the latest finish time and the latest start time are the same.
- The optimal duration of a project is the minimum time in which it can be completed.
- Resource leveling aims at smoothening of the resource usage rate without changing the project duration.

Simulation

12. Finance Controller of Dunk Limited has drawn the following projections with probability distribution:

Raw Material		Wages & Other Variable Overheads		Sales	
₹ in 000	Probability	₹ in 000	Probability	₹ in 000	Probability
08 – 10	0.2	11 – 13	0.3	34 – 38	0.1
10 – 12	0.3	13 – 15	0.5	38 – 42	0.3

12 – 14	0.3	15 – 17	0.2	42 – 46	0.4
14 – 16	0.2			46 – 50	0.2

Opening cash balance is ₹40,000 and fixed cost is estimated at ₹15,000 per month.

Required

Simulate cash flow projection and expected cash balance at the end of the sixth month. Use the following single digit random numbers.

Raw Material	4 3 1 0 4 6
Wages & Other Variable Overheads	2 7 9 1 8 9
Sales	0 6 6 0 2 8

Learning Curve

13. Marketing manager of AV Ltd. has conducted a market research on the price-demand relationship for its consumer durable product 'K-2'. K-2 is a recently launched product. The price-demand pattern will be as follows:

Price per unit (₹)	Demand (units)
11,100	1,000
10,700	2,000
9,600	3,000
8,700	4,000

K-2 is produced in batches of 1,000 units. Production manager of AV Ltd. has also researched and studied the production pattern and has believe that 50% of the variable manufacturing cost would have learning and experience curve effect. This learning & experience curve effect will be continued upto 4,000 units of production at a constant rate. But after 4,000 units of production, unit variable manufacturing cost would be equal to the unit cost at the 4th batch. The manufacturing unit cost of the first batch will be ₹4,400 of which only 50% is subjected to learning and experience curve effect. The average unit variable cost of all 4 batches will be ₹4,120.

Required

- Calculate the rate of learning that has been expected by the Production manager.
- Calculate the price at which AV Ltd. should sell the K-2 in order to maximise its contribution.

Note

$$\log 0.93 = -0.0315, \log 2 = 0.3010, 2^{-0.1047} = 0.9299, 3^{-0.1047} = 0.8913, 4^{-0.1047} = 0.8649$$

14. State whether the learning curve theory can be applied to the following independent situations briefly justifying your decision:
- A labour intensive sculpted product is carved from the metal provided to the staff. The metal is sourced from different suppliers since it is scarce. The alloy composition of the input metal is quite different among the suppliers.
 - Pieces of hand-made furniture are assembled by the company in a far off location. The labourers do not know anything about the final product which utilizes their work. As a matter of further precaution, rotation of labour is done frequently.
 - Skilled workers have been employed for a long time. The company has adequate market for the craft pieces done by these experts.
 - A company finds that it always has an adverse usage of indirect material. It wants to apply learning curve theory to improve the way standards have been set.

Target Costing

15. A toy company 'T' expects to successfully launch Toy Z based on a film character. T must pay 15% royalty on the selling price to the film company. 'T' targets a selling price of ₹ 100 per toy and profit of 25% selling price.

The following are the cost data forecast:

	₹/toy
Component A	8.50
Component B	7.00
Labour: 0.4 hr. @ ₹ 60 per hr	24.00
Product specific overheads	13.50

In addition, each toy requires 0.6 kg of other materials, which are supplied at a cost of ₹ 16 per kg with a normal 4% substandard quality which is not usable in the manufacture.

Required

Determine if the above cost structure is within the target cost. If not, what should be the extent of cost reduction?

Cost Classification

16. ANZB Financial Services Limited is an Indian banking and financial services company headquartered in Chennai, Tamil Nadu. Apart from lending to individuals, the company grants loans to micro, small and medium business enterprises. Listed below are several costs incurred in the loan division of ANZB Financial Services Limited.
- Remuneration of the loan division manager.
 - Cost of Printer Paper, File Folders, View Binders, Ink, Toner & Ribbons used in the loan division.

- (iii) Cost of the division's MacBook Pro purchased by the loan division manager last year.
- (iv) Cost of advertising in business newspaper by the bank, which is allocated to the loan division.

Cost Classification

Controllable by the loan division manager	Direct cost of the loan division	Sunk Cost
Uncontrollable by the loan division manager	Indirect Cost of the loan division	Out of Pocket Cost

Required

For each Cost, indicate which of the above mentioned Cost Classification best describe the cost.

Note

More than one classification may apply to the same cost item.

SUGGESTED ANSWERS/ HINTS**1. Limiting Factor**

Case	Basis for Selecting Priority of Product
If maximum sales (in value) is a limiting factor	Profit Volume Ratio
If raw material is a limiting factor	Contribution per unit of raw material required to produce one unit of a product
If labour hour is a limiting factor	Contribution per unit of labour hour required to produce one unit of a product
If there is a heavy demand for the product	Profit Volume Ratio

2. (i) Statement of Profitability of DRB Ltd

	Products (Amount in ₹)				
	D ₁	D ₂	D ₃	D ₄	Total
Sales	26,00,000	45,20,000	42,40,000	32,00,000	1,45,60,000
Direct Materials	6,00,000	18,20,000	18,80,000	10,00,000	53,00,000
Direct Wages	8,00,000	20,80,000	12,80,000	12,00,000	53,60,000
Overheads (W.N.2):					
Machine Related	1,60,000	1,56,000	64,000	2,40,000	6,20,000
Batch Related	1,00,000	1,30,000	80,000	1,50,000	4,60,000

Contribution	9,40,000	3,34,000	9,36,000	6,10,000	28,20,000
Product Specific Fixed Overheads	10,00,000	1,00,000	2,00,000	1,00,000	14,00,000
Gross Profit	(60,000)	2,34,000	7,36,000	5,10,000	14,20,000
General Fixed Overheads					6,20,000
Profit					8,00,000

(ii) **Break-even Point**

Total Sale Value of Product 'D₁' = ₹26,00,000

Total Contribution of Product 'D₁' = ₹9,40,000

Specific Fixed Overheads (Product D₁) = ₹10,00,000

Break-even Sales (₹) = $\frac{\text{Specific Fixed Cost}}{\text{Total Contribution}} \times \text{Total Sales Value}$

$$= \frac{₹10,00,000}{₹9,40,000} \times ₹26,00,000$$

$$= ₹27,65,957.45$$

Break-even Sales (units) = $\frac{₹27,65,957.45}{₹13.00} = 2,12,766 \text{ units}$

However, production must be done in batches of 100 units. Therefore, **2,128 batches** are required for break even. Due to the production in batches, 34 units (2,128 batches × 100 units – 2,12,766 units) would be produced extra. These 34 units would add extra cost ₹282.20 (34 units × ₹8.3*). Accordingly, break-even units as calculated above will increase by 22 units $\left(\frac{₹282.20}{₹13.00} \right)$.

$$(*) \left(\frac{₹6,00,000 + ₹8,00,000 + ₹1,60,000 + ₹1,00,000}{2,00,000 \text{ units}} \right)$$

Break-even units of product 'D₁' is 2,12,788 units (2,12,766 units + 22 units).

Workings**W.N.-1****Calculation Showing Overhead Rates**

Overhead's Related Factors	Overhead Cost (₹) [a]	Total No. of Units of Factors [b]	Overhead Rate (₹) [a] / [b]
Machining Hours	6,20,000	15,50,000 hrs.	0.40
Batch Production	4,60,000	9,200 batches	50.00

W.N.-2

Statement Showing - Overhead Costs Related to Product

Particulars	D ₁	D ₂	D ₃	D ₄
Machining hrs. related overheads	₹ 1,60,000 (4,00,000 hrs × ₹0.40)	₹ 1,56,000 (3,90,000 hrs × ₹0.40)	₹ 64,000 (1,60,000 hrs × ₹0.40)	₹ 2,40,000 (6,00,000 hrs × ₹0.40)
Batch related overheads	₹1,00,000 (2,000 batches × ₹50)	₹1,30,000 (2,600 batches × ₹50)	₹80,000 (1,600 batches × ₹50)	₹1,50,000 (3,000 batches × ₹50)

3. Working Notes

(1) Calculation of Actual Sales at Budgeted Prices

(₹)	
Actual Sales at Actual Price	11,07,000
Less: Sales Price Variance (F)	17,000
Actual Sales at Budgeted Prices	10,90,000

$$\begin{aligned}
 \text{Activity Level} &= \frac{\text{Actual Sales at Budgeted Prices}}{\text{Budgeted Sales at Full Capacity}} \times 100 \\
 &= \frac{₹10,90,000}{₹13,50,000} \times 100 \\
 &= 80.74\%
 \end{aligned}$$

(2) Segregation of Fixed & Variable Cost Element from Semi-Variable Overheads

$$\begin{aligned}
 \text{Variable Overhead} &= \frac{\text{Overhead at Full Capacity} - \text{Overhead at 75\% Capacity}}{\text{Difference in Activity Level}} \\
 &= \frac{₹3,65,000 - ₹3,23,750}{25} \\
 &= ₹1,650 \\
 \text{Fixed Overhead} &= \text{Total SV Overheads at 100\% Level} - \text{Variable Overheads at 100\% level} \\
 &= ₹3,65,000 - (₹1,650 \times 100) \\
 &= ₹2,00,000
 \end{aligned}$$

Flexible Budget at 80.74% Activity Level

(Amount in ₹)	
Sales	10,90,000

Less:	
Direct Material ($\text{₹}4,25,000 \times 80.74\%$)	3,43,148
Direct Labour ($\text{₹}1,85,000 \times 80.74\%$)	1,49,370
Variable Overheads ($\text{₹}2,15,000 \times 80.74\%$)	1,73,593
Semi-Variable Overheads	
Variable Cost ($\text{₹}1,650 \times 80.74\%$) [W.N.-2]	1,33,222
Fixed Cost [W.N.-2]	2,00,000
Profit	90,667

4. **Statement Showing "Pareto Analysis of Defects"**

Defect Type	No. of Items	% of Total Items	Cumulative Total
Scratches on the surface	110	36.67%	36.67%
Rough edges of lenses	70	23.33%	60.00%
Non-uniform grinding of lenses	60	20.00%	80.00%
Frame colours-shade differences	25	8.33%	88.33%
Power mismatches	20	6.67%	95.00%
End frame not equidistant from the centre	10	3.33%	98.33%
Spots/ Strain on lenses	5	1.67%	100.00%
	300	100.00%	

The company should focus on eliminating *scratches on the surface*, *rough edges of lenses* and *grinding of lenses* related defects which constitute 80% portion, according to Pareto Theory.

5. **Statement of Reconciliation - Budgeted Vs Actual Profit**

Particulars	₹
Budgeted Profit	5,19,000
Less: Sales Volume Contribution Planning Variance (Adverse)	52,125
Less: Sales Volume Contribution Operational Variance (Adverse)	93,825
Less: Sales Price Variance (Adverse)	39,600
Less: Variable Cost Variance (Adverse)	29,700
Less: Fixed Cost Variance (Adverse)	15,000
Actual Profit	2,88,750

Workings*Basic Workings*

Budgeted Market Share (in %)	=	$\frac{2,00,000 \text{ units}}{4,00,000 \text{ units}}$
	=	50%
Actual Market Share (in %)	=	$\frac{1,65,000 \text{ units}}{3,75,000 \text{ units}}$
	=	44%
Budgeted Contribution	=	₹21,00,000 – ₹12,66,000
	=	₹8,34,000
Average Budgeted Contribution (<i>per unit</i>)	=	$\frac{₹8,34,000}{₹2,00,000}$
	=	₹4.17
Budgeted Sales Price <i>per unit</i>	=	$\frac{₹21,00,000}{₹2,00,000}$
	=	₹10.50
Actual Sales Price <i>per unit</i>	=	$\frac{₹16,92,900}{₹1,65,000}$
	=	₹10.26
Standard Variable Cost <i>per unit</i>	=	$\frac{₹12,66,000}{₹2,00,000}$
	=	₹6.33
Actual Variable Cost <i>per unit</i>	=	$\frac{₹10,74,150}{₹1,65,000}$
	=	₹6.51

Calculation of Variances

Sales Variances:

Volume Contribution Planning*	=	Budgeted Market Share % × (Actual Industry Sales Quantity <i>in units</i> – Budgeted Industry Sales Quantity <i>in units</i>) × (Average Budgeted Contribution <i>per unit</i>)
	=	50% × (3,75,000 units – 4,00,000 units) × ₹4.17
	=	52,125 (A)

(*) *Market Size Variance*

$$\begin{aligned}
 \text{Volume Contribution Operational}^{**} &= (\text{Actual Market Share \%} - \text{Budgeted Market Share \%}) \times (\text{Actual Industry Sales Quantity in units}) \times (\text{Average Budgeted Contribution per unit}) \\
 &= (44\% - 50\%) \times 3,75,000 \text{ units} \times ₹4.17 \\
 &= 93,825 \text{ (A)}
 \end{aligned}$$

(**) *Market Share Variance*

$$\begin{aligned}
 \text{Price} &= \text{Actual Sales} - \text{Standard Sales} \\
 &= \text{Actual Sales Quantity} \times (\text{Actual Price} - \text{Budgeted Price}) \\
 &= 1,65,000 \text{ units} \times (₹10.26 - ₹10.50) = 39,600 \text{ (A)}
 \end{aligned}$$

Variable Cost Variances:

$$\begin{aligned}
 \text{Cost} &= \text{Standard Cost for Production} - \text{Actual Cost} \\
 &= \text{Actual Production} \times (\text{Standard Cost per unit} - \text{Actual Cost per unit}) \\
 &= 1,65,000 \text{ units} \times (₹6.33 - ₹6.51) \\
 &= ₹29,700 \text{ (A)}
 \end{aligned}$$

Fixed Cost Variances:

$$\begin{aligned}
 \text{Expenditure} &= \text{Budgeted Fixed Cost} - \text{Actual Fixed Cost} \\
 &= ₹3,15,000 - ₹3,30,000 \\
 &= ₹15,000 \text{ (A)}
 \end{aligned}$$

Fixed Overhead Volume Variance does not arise in a Marginal Costing system

6. (i) **Statement Showing "Ranking for Manufacturing"**

	A (₹)	B (₹)	C (₹)
Demand	1,200	1,200	1,500
Buy Price	280	xxx	161
Less: Variable Cost	187	215	111
Saving in Cost <i>per unit</i>	93	xxx	50
Hrs. Required - "Q"	3	3	1
Saving in Cost <i>per machine hour</i>	31	xxx	50
Ranking	III	I	II

Statement Showing “Optimum Production Plan”

Product	Units	Machine Hrs./ Unit	Machine Hrs. Required	Balance Hrs.
B	1,200	3	3,600	4,200
C	1,500	1	1,500	2,700
A (Balance)	900*	3	2,700	---

$$* \left(\frac{2,700 \text{ hrs.}}{3 \text{ hrs.}} \right)$$

Balance quantity of A, 300 units to be purchased from outside.

(ii) Statement Showing “Conditions for Justification (i)”

	Product A	Product C
Buy Price	< 337 Or	> 142
Variable Cost	> 130 Or	< 130

7. Analysis of Cost *plus* Pricing Approach

The company has a plan to produce 2,00,000 units and it proposed to adopt Cost *plus* Pricing approach with a markup of 25% on full budgeted cost. To achieve this pricing policy, the company has to sell its product at the price calculated below:

Qty.	2,00,000 units
Variable Cost (2,00,000 units × ₹ 32)	64,00,000
Add: Fixed Cost	16,00,000
Total Budgeted Cost	80,00,000
Add: Profit (25% of ₹ 80,00,000)	20,00,000
Revenue (need to earn)	1,00,00,000
Selling Price <i>per unit</i> $\left(\frac{₹ 1,00,00,000}{2,00,000 \text{ units}} \right)$	50 p.u.

However, at selling price ₹ 50 per unit, the company can sell 1,40,000 units only, which is 60,000 units less than the budgeted production units.

After analyzing the price-demand pattern in the market (which is price sensitive), to sell all the budgeted units market price needs to be further lowered, which might be lower than the total cost of production.

Statement Showing “Profit at Different Demand & Price Levels”

	I	II	III	IV	Budgeted
Qty. (units)	1,68,000	1,52,000	1,40,000	1,28,000	1,08,000

	₹	₹	₹	₹	₹
Sales	73,92,000	72,96,000	70,00,000	71,68,000	64,80,000
Less: Variable Cost	53,76,000	48,64,000	44,80,000	40,96,000	34,56,000
Total Contribution	20,16,000	24,32,000	25,20,000	30,72,000	30,24,000
Less: Fixed Cost	16,00,000	16,00,000	16,00,000	16,00,000	16,00,000
Profit (₹)	4,16,000	8,32,000	9,20,000	14,72,000	14,24,000
Profit (% on total cost)	5.96	12.87	15.13	25.84%	28.16%

Determination of the Best Course of Action

- (i) Taking the above calculation and analysis into account, the company should produce and sell 1,28,000 units at ₹ 56. At this price company will not only be able to achieve its desired mark up of 25% on the total cost but can earn maximum contribution as compared to other even higher selling price.
 - (ii) If the company wants to uphold its proposed pricing approach with the budgeted quantity, it should try to reduce its variable cost per unit for example by asking its supplier to provide a quantity discount on the materials purchased.
8. (i) **Transfer Price *per unit* of Product Z that Division W Should Quote *in order to meet Target Profit***

Quotation for the 40,000 units of product Z should be such that meet Division W's target profit and interest cost on working capital. Therefore the minimum quote for product Z will be calculated as follows:

Particulars	Amount (₹)
Target Profit (given for the year)	2,50,00,000
Add: Interest Cost on Working Capital (₹12,00,00,000 @11.5%)	1,38,00,000
Required Profit	3,88,00,000
Add: Fixed Overhead	4,00,00,000
Target Contribution	7,88,00,000
Less: Contribution Earned --- External Sales {60,000 units × (₹2,500 – ₹1,600)}	5,40,00,000
Contribution Required – Internal Sales	2,48,00,000
Contribution <i>per unit</i> of Product Z (₹2,48,00,000 ÷ 40,000 units)	620
Transfer Price of Product Z to Division B (Variable Cost <i>per unit</i> + Contribution <i>per unit</i>)	2,220

(ii) The Two Transfer Prices Based on Opportunity Costs

For the 30,000 units (i.e. maximum capacity – maximum external market demand) at variable cost of production i.e. ₹1,600 per unit.

For the next 10,000 units (i.e. external market demand – maximum possible sale) at market selling price i.e. ₹2,500 per unit.

9. Let the P_1 , P_2 and P_3 be the three products to be manufactured. Then the data are as follows:

Products	Product ingredients			
	A	B	C	Inert Ingredients
P_1	5 %	10%	5%	80%
P_2	5%	5%	10%	80%
P_3	20%	5%	10%	65%
Cost per kg (₹)	64	16	40	16

Cost of Product P_1

$$= 5\% \times ₹64 + 10\% \times ₹16 + 5\% \times ₹40 + 80\% \times ₹16$$

$$= ₹19.60 \text{ per kg}$$

Cost of Product P_2

$$= 5\% \times ₹64 + 5\% \times ₹16 + 10\% \times ₹40 + 80\% \times ₹16$$

$$= ₹20.80 \text{ per kg.}$$

Cost of Product P_3

$$= 20\% \times ₹64 + 5\% \times ₹16 + 10\% \times ₹40 + 65\% \times ₹16$$

$$= ₹28.00 \text{ per kg.}$$

Let x_1 , x_2 , and x_3 be the quantity (in kg) of P_1 , P_2 , and P_3 respectively to be manufactured. The LP problem can be formulated:

Objective function:

$$\begin{aligned} \text{Maximise } Z &= (\text{Selling Price} - \text{Cost Price}) \times \text{Quantity of Product} \\ &= (₹32.60 - ₹19.60) x_1 + (₹34.80 - ₹20.80) x_2 + (₹36.00 - ₹28) x_3 \\ &= 13x_1 + 14x_2 + 8x_3 \end{aligned}$$

Subject to Constraints:

$$1/20 x_1 + 1/20 x_2 + 1/5 x_3 \leq 100$$

$$\text{Or } x_1 + x_2 + 4x_3 \leq 2,000$$

$$1/10 x_1 + 1/20 x_2 + 1/20 x_3 \leq 180$$

$$\text{Or } 2x_1 + x_2 + x_3 \leq 3,600$$

$$1/20 x_1 + 1/10 x_2 + 1/10 x_3 \leq 120$$

$$\text{Or } x_1 + 2x_2 + 2x_3 \leq 2,400$$

$$x_1 \leq 30$$

$$\text{and } x_1, x_2, x_3 \geq 0$$

10. The given information can be tabulated in following transportation problem -

Manager	Assignment			Time Available (Hours)
	TA (₹)	TPA (₹)	GCR (₹)	
C ₁	1,800	2,250	2,850	176
C ₂	2,100	1,950	1,800	176
C ₃	2,400	2,100	2,250	176
Time Required (Hours)	143	154	176	

The given problem is an unbalanced transportation problem. Introducing a dummy assignment to balance it, we get-

Manager	Assignment				Time Available (Hours)
	TA (₹)	TPA (₹)	GCR (₹)	Dummy (₹)	
C ₁	1,800	2,250	2,850	0	176
C ₂	2,100	1,950	1,800	0	176
C ₃	2,400	2,100	2,250	0	176
Time Required (Hours)	143	154	176	55	528

The objective here is to maximize total billing amount of the auditors. For achieving this objective, let us convert this maximization problem into a minimization problem by subtracting all the elements of the above payoff matrix from the highest payoff i.e. ₹2,850.

Manager	Assignment				Time Available (Hours)
	TA (₹)	TPA (₹)	GCR (₹)	Dummy (₹)	
C ₁	1,050	600	0	2,850	176
C ₂	750	900	1,050	2,850	176
C ₃	450	750	600	2,850	176
Time Required (Hours)	143	154	176	55	528

Now, let us apply VAM method to the above matrix for finding the initial feasible solution.

Manager	Assignment				Time Avail. (Hours)	Difference
	TA (₹)	TPA (₹)	GCR (₹)	Dummy (₹)		
C ₁	1,050	600	0 176	2,850	176/0	600 - -
C ₂	750	900 121	1,050	2,850 55	176/55/0	150, 150 1,950
C ₃	450 143	750 33	600	2,850	176/33/0	150, 300, 2,100
Time Required	143/0	154/121/0	176/0	55/0	528	
Difference	300	150	600	0		
	300	150	--	0		
	-	150	-	0		

The initial solution is given below. It can be seen that it is a degenerate solution since the number of allocation is 5. In order to apply optimality test, the total number of allocations should be 6 ($m + n - 1$). To make the initial solution a non-degenerate, we introduce a very small quantity in the least cost independent cell which is cell of C₃, GCR.

Manager	Assignment			
	TA (₹)	TPA (₹)	GCR (₹)	Dummy (₹)
C ₁	1,050	600	0 176	2,850
C ₂	750	900 121	1,050	2,850 55
C ₃	450 143	750 33	600 e	2,850

Let us test the above solution for optimality-

($u_i + v_j$) Matrix for Allocated / Unallocated Cells

				U_i
-150	150	0	2,100	-600
600	900	750	2,850	150

	450	750	600	2,700	0
v_j	450	750	600	2,700	

Now we calculate $\Delta_{ij} = C_{ij} - (u_i + v_j)$ for non basic cells which are given in the table below-

Δ_{ij} Matrix

1,200	450		750
150		300	
			150

Since, all allocations in $\Delta_{ij} = C_{ij} - (u_i + v_j)$ are non negative, the allocation is optimal. The allocation of assignments to managers and their billing amount is given below:

Manager	Assignment	Billing Amount
C₁	Global Compliance & Reporting (GCR)	₹5,01,600 (176 hrs. × ₹2,850)
C₂	Tax Performance Advisory (TPA)	₹2,35,950 (121 hrs. × ₹1,950)
C₃	Tax Accounting (TA)	₹3,43,200 (143 hrs. × ₹2,400)
C₃	Tax Performance Advisory (TPA)	₹69,300 (33 hrs. × ₹2,100)
Total Billing		₹11,50,050

11. (i) Invalid

Reason: As per the rules of network construction, parallel activities between two events, without intervening events, are prohibited. Dummy activities are needed when two or more activities have same initial and terminal events. Dummy activities do not consume time or resources.

(ii) Valid

Reason: As per the conventions adopted in drawing networks, the head event or terminal node always has a number higher than that of initial node or tail event.

(iii) Invalid

Reason: The difference between the latest event time and the earliest event time is termed as slack of an event. Free float is determined by subtracting head event slack from the total float of an activity.

(iv) Invalid

Reason: For every critical activity in a network, the earliest start time and the latest start time is same and also the earliest finish time and the latest finish time is same.

(v) Invalid

Reason: The optimum duration is the time period in which the total cost of the project is minimum.

(vi) Valid

Reason: Resource leveling is a network technique used for reducing the requirement of a particular resource due to its paucity or insufficiency within a constraint on the project duration. The process of resource leveling utilize the large floats available on non-critical activities of the project and cuts down the demand of the resource.

12. Allocation of Random Numbers

Raw Material			Wages & Other Variable Overheads			Sales		
Mid Point	Cum. Prob.	Random Nos.	Mid Point	Cum. Prob.	Random Nos.	Mid Point	Cum. Prob.	Random Nos.
9	0.2	0 – 1	12	0.3	0 – 2	36	0.1	0
11	0.5	2 – 4	14	0.8	3 – 7	40	0.4	1 – 3
13	0.8	5 – 7	16	1.0	8 – 9	44	0.8	4 – 7
15	1.0	8 – 9				48	1.0	8 – 9

Simulation Table

(₹ in 000)

Month	Raw Material	Wages & Other V.O	Sales	Fixed Cost	Net Cash Flow	Cash Balancing (Opening ₹40 thousand)
1	11	12	36	15	-2	38
2	11	14	44	15	+ 4	42
3	9	16	44	15	+4	46
4	9	12	36	15	0	46
5	11	16	40	15	-2	44
6	13	16	48	15	+4	48

13. (i) Variable cost per unit that will be effected by learning and experience curve is ₹2,200 (₹4,400 – 50% of ₹ 4,400).

Let, 'r' be the learning curve rate.

No. of Batch (x)	Cumulative Average Cost per unit (y)
1	2,200
2	2,200 r
4	2,200 r ²

$$\text{If } 2,200 r^2 = ₹1,920 \text{ (₹4,120 – 50\% of ₹ 4,400)}$$

$$r^2 = 0.8727$$

$$r = 0.934$$

$$\text{Therefore, Learning Curve Effect} = 93\% \text{ (rounded off)}$$

(ii) Calculation of Optimum Price

Price per unit (₹)	Demand (units)	Variable Cost per unit * [W.N.] (₹)	Variable Cost per unit** (₹)	Total Variable Cost per unit (₹)	Contribution per unit (₹)	Total Contribution (₹)
11,100.00	1,000	2,200.00	2,200.00	4,400.00	6,700.00	67,00,000
10,700.00	2,000	2,046.00	2,200.00	4,246.00	6,454.00	1,29,08,000
9,600.00	3,000	1,960.86	2,200.00	4,160.86	5,439.14	1,63,17,420
8,700.00	4,000	1,902.78	2,200.00	4,102.78	4,597.22	1,83,88,880

(*) This represents variable cost part which is affected by the learning and experience curve effect.

(**) This represents variable cost part which is not affected by the learning and experience curve effect.

Working Note [W.N.]

Variable Cost per unit

Output in Batches (x)	Average Cost of the First Unit (a)	$x^{-0.1047}$	Cumulative Average Cost per unit (y)
1	2,200	1.0000	2,200.00
2	2,200	0.9299	2,046.00
3	2,200	0.8913	1,960.86
4	2,200	0.8649	1,902.78

$$y = ax^b$$

Where,

$$\begin{aligned}
 y &= \text{Cumulative average unit costs} \\
 a &= \text{Average cost of the first unit} \\
 x &= \text{Cumulative number of batches} \\
 b &= \text{Log of learning ratio} \div \text{Log of 2} \\
 &= \log 0.93 \div \log 2 \\
 &= -0.0315 \div 0.3010 \\
 &= -0.1047
 \end{aligned}$$

14. (i) 'Learning Curve Theory' will not be applicable as *alloy combination of the input metal is quite different* among the suppliers hence learning experience with one type of metal may not be beneficial for the workers to deal with other metal with separate alloy composition.
- (ii) 'Learning Curve Theory' will not be applicable as in this situation *rotation of labour is done frequently*, labours will not be able to get the benefit of learning and apply their learning. Hence, learning curve theory can not be applied.
- (iii) 'Learning Curve Theory' will not be applicable as in this situation as *workers are skilled and employed for a long time*, they have already achieved maximum level of expertise by taking advantage of learning. Hence, at this point of time learning curve theory can not be applied.
- (iv) 'Learning Curve Theory' will not be applicable as indirect materials are the materials which are not used directly in the production (not directly proportionate with volume of output) and usually used machines (e.g. lubricants, spares parts etc.) with less human interactions. Adverse usage of indirect materials can be controlled through proper monitoring and appropriate standard settings and not from applying learning curve theory.

15. **Statement Showing Target Cost "Z"**

₹ / Toy	
Target Selling Price	100.00
Less: Royalty @15%	15.00
Less: Profit @ 25%	25.00
Target Cost	60.00

Statement Showing Cost Structure "Z"

₹ / Toy	
Component A	8.50
Component B	7.00

Labour (0.40 hr. × ₹ 60 per hr.)	24.00
Product Specific Overheads	13.50
Other Material (0.6 kg / 96% × ₹16)	10.00
Total Cost of Manufacturing	63.00

Total Cost of Manufacturing is ₹ 63 while Target Cost is ₹ 60. Company "T" should make efforts to **reduce its manufacturing cost by ₹ 3** to achieve Target Selling Price of ₹100.

16. Cost Incurred – Cost Classification

S. No.	Cost Incurred	Classification 1	Classification 2	Classification 3
(i)	Remuneration of the loan division manager.	Uncontrollable by the loan division manager.	Direct cost of the loan division.	Out of Pocket Cost
(ii)	Cost of Printer Paper, File Folders, View Binders, Ink, Toner & Ribbons used in the loan division.	Controllable by the loan division manager.	Direct cost of the loan division.	Out of Pocket Cost
(iii)	Cost of the division's MacBook Pro purchased by the loan division manager last year.	Controllable by the loan division manager.	Direct cost of the loan division.	Sunk Cost
(iv)	Cost of advertising in business newspaper by the bank, which is allocated to the loan division.	Uncontrollable by the loan division manager.	Indirect Cost of the loan division.	Out of Pocket Cost
