# PAPER - 3: COST ACCOUNTING AND FINANCIAL MANAGEMENT <br> PART-I: COST ACCOUNTING <br> QUESTIONS 

## Material

1. Rounak Ltd. is the manufacturer of monitors for PCs. A monitor requires 4 units of Part-M. The following are the details of its operation during 20X8:

Average monthly market demand
Ordering cost
Inventory carrying cost
Cost of Part
Normal usage
Minimum usage
Maximum usage
Lead time to supply

2,000 Monitors
₹ 1,000 per order
20\% per annum
₹ 350 per part
425 parts per week
140 parts per week
710 parts per week
3-5 weeks

Compute from the above:
(i) Economic Order Quantity (EOQ). If the supplier is willing to supply quarterly 30,000 units of Part-M at a discount of $5 \%$, is it worth accepting?
(ii) Reorder level
(iii) Maximum level of stock
(iv) Minimum level of stock.

## Labour

2. A job can be executed either through workman A or B. A takes 32 hours to complete the job while $B$ finishes it in 30 hours. The standard time to finish the job is 40 hours.
The hourly wage rate is same for both the workers. In addition workman A is entitled to receive bonus according to Halsey plan ( $50 \%$ ) sharing while $B$ is paid bonus as per Rowan plan. The works overheads are absorbed on the job at ₹ 7.50 per labour hour worked. The factory cost of the job comes to ₹ 2,600 irrespective of the workman engaged.
Interpret the hourly wage rate and cost of raw materials input. Also show cost against each element of cost included in factory cost.

## Overheads

3. Sree Ajeet Ltd. having fifteen different types of automatic machines furnishes information as under for 20X8-20X9
(i) Overhead expenses: Factory rent ₹ $1,80,000$ (Floor area $1,00,000$ sq.ft.), Heat and gas ₹ 60,000 and supervision ₹ $1,50,000$.
(ii) Wages of the operator are ₹ 200 per day of 8 hours. Operator attends to one machine when it is under set up and two machines while they are under operation.
In respect of machine $B$ (one of the above machines) the following particulars are furnished:
(i) Cost of machine $₹ 1,80,000$, Life of machine- 10 years and scrap value at the end of its life ₹ 10,000
(ii) Annual expenses on special equipment attached to the machine are estimated as ₹ 12,000
(iii) Estimated operation time of the machine is 3,600 hours while set up time is 400 hours per annum
(iv) The machine occupies 5,000 sq.ft. of floor area.
(v) Power costs ₹ 5 per hour while machine is in operation.

Estimate the comprehensive machine hour rate of machine B. Also find out machine costs to be absorbed in respect of use of machine $B$ on the following two work orders

|  | Work order- 1 | Work order-2 |
| :--- | ---: | ---: |
| Machine set up time (Hours) | 15 | 30 |
| Machine operation time (Hours) | 100 | 190 |

## Non-Integrated Accounting

4. The financial books of a company reveal the following data for the year ended 31 st March, 20X8:

| Opening Stock: | $(₹)$ |
| :--- | ---: |
| Finished goods 625 units | 53,125 |
| Work-in-process | 46,000 |
| 01.04.20X7 to 31.03.20X8 |  |
| Raw materials consumed | $8,40,000$ |
| Direct Labour | $6,10,000$ |
| Factory overheads | $4,22,000$ |
| Administration overheads (Production related) | $1,98,000$ |
| Dividend paid | $1,22,000$ |
| Bad Debts | 18,000 |
| Selling and Distribution Overheads | 72,000 |

PAPER - 3: COST ACCOUNTING AND FINANCIAL MANAGEMENT

| Interest received | 38,000 |
| :--- | ---: |
| Rent received | 46,000 |
| Sales 12,615 units | $22,80,000$ |
| Closing Stock: Finished goods 415 units | 45,650 |
| Work-in-process | 41,200 |

The cost records provide as under:
> Factory overheads are absorbed at $70 \%$ of direct wages.
> Administration overheads are recovered at $15 \%$ of factory cost.
$>$ Selling and distribution overheads are charged at ₹ 3 per unit sold.
$>$ Opening Stock of finished goods is valued at ₹ 120 per unit.
> The company values work-in-process at factory cost for both Financial and Cost Profit Reporting.
Required:
(i) Prepare a statements for the year ended 31 st March, 20X8. Show
> the profit as per financial records
$>$ the profit as per costing records.
(ii) Prepare a statement reconciling the profit as per costing records with the profit as per Financial Records.

## Contract Costing

5. A construction company undertook a contract at an estimated price of ₹ 108 lakhs, which includes a budgeted profit of ₹ 18 lakhs. The relevant data for the year ended 31.03.20 X8 are as under:

|  | (₹ ${ }^{\prime} 000$ ) |
| :--- | ---: |
| Materials issued to site | 5,000 |
| Direct wages paid | 3,800 |
| Plant hired | 700 |
| Site office costs | 270 |
| Materials returned from site | 100 |
| Direct expenses | 500 |
| Work certified | 10,000 |
| Work not certified | 230 |
| Progress payment received | 7,200 |

A special plant was purchased specifically for this contract at ₹ $8,00,000$ and after use on this contract till the end of $31.02 .20 \times 8$, it was valued at $₹ 5,00,000$. This cost of materials at site at the end of the year was estimated at ₹ $18,00,000$ Direct wages accrued as on 31.03.20X8 was ₹ $1,10,000$.

## Required

Prepare the Contract Account for the year ended $31^{\text {st }}$ March, 20X8.

## Job Costing

6. A company has been asked to quote for a job. The company aims to make a net profit of $30 \%$ on sales. The estimated cost for the job is as follows:
Direct materials 10 kg @₹10 per kg
Direct labour 20 hours @ ₹5 per hour
Variable production overheads are recovered at the rate of ₹2 per labour hour.
Fixed production overheads for the company are budgeted to be ₹ $1,00,000$ each year and are recovered on the basis of labour hours.
There are 10,000 budgeted labour hours each year. Other costs in relation to selling, distribution and administration are recovered at the rate of ₹ 50 per job.
Determine quote for the job by the Company.

## Process Costing

7. From the following information for the month of January, 20X9, prepare Process-III cost accounts.

| Opening WIP in Process-III | 1,600 units at $₹ 24,000$ |
| :--- | ---: |
| Transfer from Process-II | 55,400 units at $₹ 6,23,250$ |
| Transferred to warehouse | 52,200 units |
| Closing WIP of Process-III | 4,200 units |
| Units Scrapped | 600 units |
| Direct material added in Process-III | $₹ 2,12,400$ |
| Direct wages | $₹ 96,420$ |
| Production overheads | $₹ 56,400$ |

## Degree of completion:

|  | Opening Stock | Closing Stock | Scrap |
| :--- | :---: | :---: | :---: |
| Material | $80 \%$ | $70 \%$ | $100 \%$ |
| Labour | $60 \%$ | $50 \%$ | $70 \%$ |
| Overheads | $60 \%$ | $50 \%$ | $70 \%$ |

The normal loss in the process was $5 \%$ of the production and scrap was sold @ ₹ 5 per unit.
(Students may treat material transferred from Process - II as Material - A and fresh material used in Process - III as Material B)

## Joint Products \& By Products

8. In an Oil Mill four products emerge from a refining process. The total cost of input during the quarter ending March $20 \times 8$ is $₹ 1,48,000$. The output, sales and additional processing costs are as under:

| Products | Output in Litres | Additional processing <br> cost after split off (₹) | Sales value (₹) |
| :---: | :---: | ---: | ---: |
| ACH | 8,000 | 43,000 | $1,72,500$ |
| BCH | 4,000 | 9,000 | 15,000 |
| CSH | 2,000 | - | 6,000 |
| DSH | 4,000 | 1,500 | 45,000 |

In case these products were disposed-off at the split off point that is before further processing, the selling price per litre would have been:

| $\mathbf{A C H}(₹)$ | $\mathbf{B C H}(₹)$ | $\mathbf{C S H}(₹)$ | DSH $(₹)$ |
| :---: | :---: | :---: | :---: |
| 15.00 | 6.00 | 3.00 | 7.50 |

Produce a statement of profitability based on:
(i) If the products are sold after further processing is carried out in the mill.
(ii) If they are sold at the split off point.

## Operating Costing

9. In order to develop tourism, Nepal Airline has been given permit to operate three flights in a week between X and Y cities (both side). The airline operates a single aircraft of 160 seats capacity. The normal occupancy is estimated at $60 \%$ throughout the year of 52 weeks. The one-way fare is ₹ 7,200 . The cost of operation of flights is:

Fuel cost (variable)
Food served on board on non-chargeable basis
Commission
Fixed cost:
Aircraft lease ₹ $3,50,000$ per flight
Landing Charges
₹ 96,000 per flight
₹ 125 per passenger
$5 \%$ of fare applicable for all booking
₹ 72,000 per flight

Required:
(i) Calculate the net operating income per flight.
(ii) The airline expects that its occupancy will increase to 108 passengers per flight if the fare is reduced to $₹ 6,720$. Advise whether this proposal should be implemented or not.

## Standard Costing

10. Aaradhya Ltd.manufactures a commercial product for which the standard cost per unit is as follows:

|  | (₹) |
| :---: | :---: |
| Material: |  |
| 5 kg @ ₹ 4 per kg. | 20.00 |
| Labour: |  |
| 3 hours @ ₹ 10 per hour | 30.00 |
| Overhead |  |
| Variable: 3 hours @ ₹ 1 | 3.00 |
| Fixed: 3 hours @ ₹0.50 | 1.50 |
| Total | 54.50 |

During Jan. 20X8, 600 units of the product were manufactured at the cost shown below:

|  | $(₹)$ |
| :--- | ---: |
| Materials purchased: |  |
| $5,000 \mathrm{~kg}$. $₹ 4.10$ per kg. |  |
| Materials used: | 20,500 |
| $3,500 \mathrm{~kg}$. |  |
| Direct Labour: |  |
| 1,700 hours @ ₹ 9 | 15,300 |
| Variable overhead | 1,900 |
| Fixed overhead | 900 |
| Total | 38,600 |

The flexible budget required 1,800 direct labour hours for operation at the monthly activity level used to set the fixed overhead rate.
Compute:
(a) Material price variance, (b) Material Usage variance; (c) Labour rate variance; (d) Labour efficiency variance; (e) Variable overhead expenditure variance; (f) Variable overhead efficiency variance; (g) Fixed overhead expenditure variance; (h) Fixed overhead
volume variance; (i) Fixed overhead capacity variance; and (j) Fixed overhead efficiency variance.
Also reconcile the standard and actual cost of production.

## Marginal Costing

11. A company sells its product at $₹ 15$ per unit. In a period, if it produces and sells 8,000 units, it incurs a loss of ₹ 5 per unit. If the volume is raised to 20,000 units, it earns a profit of ₹ 4 per unit. Calculate break-even point both in terms of rupees as well as in units.

## Budget and Budgetary Control

12. Gaurav Ltd. is drawing a production plan for its two products Minimax (MM) and Heavyhigh (HH) for the year 20X8-X9. The company's policy is to hold closing stock of finished goods at $25 \%$ of the anticipated volume of sales of the succeeding month. The following are the estimated data for two products:

|  | Minimax (MM) | Heavyhigh (HH) |
| :--- | ---: | ---: |
| Budgeted Production units | $1,80,000$ | $1,20,000$ |
|  | $(\boldsymbol{₹})$ | $(₹)$ |
| Direct material cost per unit | 220 | 280 |
| Direct labour cost per unit | 130 | 120 |
| Manufacturing overhead | $4,00,000$ | $5,00,000$ |

The estimated units to be sold in the first four months of the year 20X8-X9 are as under

|  | April | May | June | July |
| :--- | :---: | :---: | :---: | :---: |
| Minimax | 8,000 | 10,000 | 12,000 | 16,000 |
| Heavyhigh | 6,000 | 8,000 | 9,000 | 14,000 |

Prepare production budget for the first quarter in monthwise

## Miscellaneous

13. (a) Discuss the essential features of a good cost accounting system.
(b) Explain the difference between Cost Control and Control Reduction.
(c) Define Controllable Cost and Uncontrollable Cost.
(d) Distinguish between job and batch costing.

## SUGGESTED HINTS/ANSWERS

## Cost Accounting

1. (1) $A=$ Annual usage of parts $=$ Monthly demand for monitors $\times 4$ parts $\times 12$ months
$=2,000$ monitors $\times 4$ parts $\times 12$ months $=96,000$ units
$0=$ Ordering cost per order $=₹ 1,000 /$ - per order
$\mathrm{C}_{1}=$ Cost per part $=$ ₹ $350 /-$
$\mathrm{C}_{1}=$ Inventory carrying cost per unit per annum
$=20 \% \times ₹ 350=₹ 70 /-$ per unit, per annum
Economic order quantity (EOQ):

$$
\begin{aligned}
\text { E.O.Q } & =\sqrt{\frac{2 \mathrm{AO}}{\mathrm{C}_{1}}}=\sqrt{\frac{2 \times 96,000 \text { units } \times ₹ 1,000}{₹ 70}} \\
& =1,656 \text { parts (approx.) }
\end{aligned}
$$

The supplier is willing to supply 30,000 units at a discount of $5 \%$, therefore cost of each part shall be $₹ 350-5 \%$ of $350=₹ 332.5$
Total cost (when order size is 30,000 units):
$=$ Cost of 96,000 units + Ordering cost + Carrying cost.
$=(96,000$ units $\times ₹ 332.50)+\left(\frac{96,000 \text { units }}{30,000 \text { units }} \times ₹ 1,000\right)+\frac{1}{2}(30,000$ units $\times 20 \% \times$ ₹ 332.50 )
$=₹ 3,19,20,000+₹ 3,200^{*}+₹ 9,97,500=₹ 3,29,20,700$

## Total cost (when order size is 1,656 units):

$=(96,000$ units $\times ₹ 350)+\left(\frac{96,000 \text { units }}{1,656 \text { units }} \times ₹ 1,000\right)+\frac{1}{2}(1,656$ units $\times 20 \% \times ₹ 350)$
= ₹ $3,36,00,000+₹ 57,970^{*}+₹ 57,960=₹ 3,37,15,930$
Since, the total cost under the supply of 30,000 units with $5 \%$ discount is lower than that when order size is 1,656 units, therefore the offer should be accepted.
Note: While accepting this offer consideration of capital blocked on order size of 30,000 units has been ignored.
*Order size can also be taken in absolute figure.
(2) Reorder level
$=$ Maximum consumption $\times$ Maximum re-order period
$=710$ units $\times 5$ weeks $=3,550$ units
(3) Maximum level of stock
$=$ Re-order level + Reorder quantity - (Min. usage $\times$ Min. reorder period)
$=3,550$ units $+1,656$ units $-(140$ units $\times 3$ weeks $)=4,786$ units.
(4) Minimum level of stock
$=$ Re-order level - Normal usage $\times$ Average reorder period
$=3,550$ units $-(425$ units $\times 4$ weeks $)=1,850$ units.
2. Calculation of :

1. Time saved and wages:

| Workmen | A | B |
| :--- | ---: | ---: |
| Standard time (hrs.) | 40 | 40 |
| Actual time taken (hrs.) | 32 | 30 |
| Time saved (hrs.) | 8 | 10 |
| Wages paid @ ₹ x per hr. (₹) | 32 x | 30 x |

2. Bonus Plan:

|  | Halsey | Rowan |
| :--- | ---: | ---: |
| Time saved (hrs.) | 8 | 10 |
| Bonus (₹) | 4 x | 7.5 x |
|  | $\left\lfloor\frac{8 \mathrm{hrs} \times \text { ₹ } \mathrm{x}}{2}\right\rfloor$ | $\left\lfloor\frac{10 \mathrm{hrs}}{40 \mathrm{hrs}} \times 30 \mathrm{hrs} \times\right.$ ₹ x$\rfloor$ |

3. Total wages:

Workman A: $32 x+4 x=₹ 36 x$
Workman B: $30 \mathrm{x}+7.5 \mathrm{x}=₹ 37.5 \mathrm{x}$
Statement of factory cost of the job

| Workmen | $\mathbf{A}$ (₹) | $\mathbf{B}$ (₹) |
| :--- | ---: | ---: |
| Material cost (assumed) | y | y |
| Wages (shown above) | 36 x | 37.5 x |
| Works overhead | 240 | 225 |
| Factory cost (given) | 2,600 | 2,600 |

The above relations can be written as follows:
$36 x+y+240=2,600$
$37.5 x+y+225=2,600$
(ii)

Subtracting (i) from (ii) we get
$1.5 x-15=0$
Or, $1.5 x=15$
Or, $x=₹ 10$ per hour
On substituting the value of $x$ in (i) we get $y=₹ 2,000$
Hence the wage rate per hour is ₹ 10 and the cost of raw material is ₹ 2,000 on the job.

11. We know that $S-V=F+P$ (S-Sales, V- Variable cost, F- Fixed cost and P-Profit/loss)
$\therefore$ Suppose variable cost $=\mathrm{x}$ per unit
Fixed Cost =y
When sales is 8,000 units, then
$15 \times 8,000-8,000 x=y-40,000$.
When sales volume raised to 20,000 units, then
$15 \times 20,000-20,000 x=y+80,000 \ldots \ldots \ldots \ldots .$.
Or, $\quad 1,20,000-8,000 x=y-40,000$
And 3,00,000-20,000 $x=y+80,000$
From (3) \& (4) we get $x=₹ 5$.

Variable cost per unit = ₹ 5
Putting this value in 3rd equation:
$1,20,000-(8,000 \times 5)=y-40,000$
or $y=₹ 1,20,000$
Fixed Cost $=₹ 1,20,000$
$P / V$ ratio $=\frac{S-V}{S}=\frac{15-5}{15} \times 100=\frac{200}{3}=66 \frac{2}{3} \%$.
Suppose break-even sales $=x$
$15 x-5 x=1,20,000 \quad$ (at BEP, contribution will be equal to fixed cost)
$x=12,000$ units.
Or Break-even sales in units $=12,000$
Break-even sales in rupees $=12,000 \times ₹ 15=₹ 1,80,000$

13. (a) The essential features, which a good cost and management accounting system should possess, are as follows:
(i) Informative and simple: Cost and management accounting system should be tailor-made, practical, simple and capable of meeting the requirements of a business concern. The system of costing should not sacrifice the utility by introducing meticulous and unnecessary details.
(ii) Accurate and authentic: The data to be used by the cost and management accounting system should be accurate and authenticated; otherwise it may distort the output of the system and a wrong decision may be taken.
(iii) Uniformity and consistency: There should be uniformity and consistency in classification, treatment and reporting of cost data and related information. This is required for benchmarking and comparability of the results of the system for both horizontal and vertical analysis.
(iv) Integrated and inclusive: The cost and management accounting system should be integrated with other systems like financial accounting, taxation, statistics and operational research etc. to have a complete overview and clarity in results.
(v) Flexible and adaptive: The cost and management accounting system should be flexible enough to make necessary amendments and modification in the system to incorporate changes in technological, reporting, regulatory and other requirements.
(vi) Trust on the system: Management should have trust on the system and its output. For this, an active role of management is required for the development of such a system that reflect a strong conviction in using information for decision making
(b)

| Cost Control | Cost Reduction |
| :--- | :--- | :--- |
| 1.Cost control aims at maintaining <br> the costs in accordance with the <br> established standards. | 1.Cost reduction is concerned with <br> reducing costs. It challenges all <br> standards and endeavours to <br> better them continuously |
| 2.Cost control seeks to attain lowest <br> possible cost under existing <br> conditions. | 2.Cost reduction recognises no <br> condition as permanent, since a <br> change will result in lower cost. |

| 3. | In case of cost control, emphasis <br> is on past and present | $3 .$In case of cost reduction, it is on <br> present and future. |
| :--- | :--- | :--- | :--- |
| $4 .$Cost control is a preventive <br> function | $4 .$Cost reduction is a corrective <br> function. It operates even when <br> an efficient cost control system <br> exists. |  |
| 5. | Cost control ends when targets <br> are achieved. | $5 .$Cost reduction has no visible <br> end. |

(c) (i) Controllable Costs: - Cost that can be controlled, typically by a cost, profit or investment centre manager is called controllable cost. Controllable costs incurred in a particular responsibility centre can be influenced by the action of the executive heading that responsibility centre. For example, direct costs comprising direct labour, direct material, direct expenses and some of the overheads are generally controllable by the shop level management.
(ii) Uncontrollable Costs - Costs which cannot be influenced by the action of a specified member of an undertaking are known as uncontrollable costs. For example, expenditure incurred by, say, the tool room is controllable by the foreman in-charge of that section but the share of the tool-room expenditure which is apportioned to a machine shop is not to be controlled by the machine shop foreman.
(d) Distinction between Job and Batch Costing:

| Sr. No | Job Costing | Batch Costing |
| :--- | :--- | :--- |
| 1 | Method of costing used for non- <br> standard and non- repetitive <br> products produced as per customer <br> specifications and against specific <br> orders. | Homogeneous products <br> produced in a continuous <br> production flow in lots. |
| 2 | Cost determined for each Job | Cost determined in aggregate for <br> the entire Batch and then arrived <br> at on per unit basis. |
| 3 | Jobs are different from each other <br> and independent of each other. <br> Each Job is unique.Products produced in a batch are <br> homogeneous and lack of <br> individuality |  |

## PART-II: FINANCIAL MANAGEMENT QUESTIONS

## Time Value of Money

1. Mr. $X$ took a loan of $₹ 30,00,000$ lakh to purchase an asset from a financial institution at $14 \%$ interest per year. The amount has to be repaid in 10 equal annual instalments. Calculate the instalment amount.

## Fund Flow Statement

2. Following are the financial statements of Zed Ltd.:

| Gain on sale of machinery | 1,850 |
| Profits before tax | 99,300 |
| Income-tax | $(48,250)$ |
| Profit after tax | 51,050 |

Additional information:
(i) Machinery with a net book value of $₹ 9,150$ was sold during the year.
(ii) The shares of ' A ' Ltd. were acquired by issue of debentures.

Required:
Prepare a Funds Flow Statement (Statement of changes in financial position on Working capital basis) for the year ended March 31, 20X7.

## Ratio Analysis

3. Assuming the current ratio of a Company is 2 , State in each of the following cases whether the ratio will improve or decline or will have no change:
(i) Payment of current liability
(ii) Purchase of fixed assets by cash
(iii) Cash collected from Customers
(iv) Bills receivable dishonoured
(v) Issue of new shares

## Cost of Capital

4. $\mathrm{M} / \mathrm{s}$. Navya Corporation has a capital structure of $40 \%$ debt and $60 \%$ equity. The company is presently considering several alternative investment proposals costing less than ₹ 20 lakhs. The corporation always raises the required funds without disturbing its present debt equity ratio.
The cost of raising the debt and equity are as under:

| Project cost | Cost of debt | Cost of equity |
| :--- | :---: | :---: |
| Upto ₹ 2 lakhs | $10 \%$ | $12 \%$ |
| Above ₹ 2 lakhs \& upto to ₹ 5 lakhs | $11 \%$ | $13 \%$ |
| Above ₹ 5 lakhs \& upto ₹10 lakhs | $12 \%$ | $14 \%$ |
| Above ₹ 10 lakhs \& upto ₹ 20 lakhs | $13 \%$ | $14.5 \%$ |

Assuming the tax rate at $50 \%$, calculate:-
(i) Cost of capital of two projects $X$ and $Y$ whose fund requirements are $₹ 6.5$ lakhs and ₹ 14 lakhs respectively.
(ii) If a project is expected to give after tax return of $10 \%$, determine under what conditions it would be acceptable?

## Capital Structure Decisions

5. Rounak Ltd. is an all equity financed company with a market value of ₹ $25,00,000$ and cost of equity $\left(\mathrm{K}_{\mathrm{e}}\right) 21 \%$. The company wants to buyback equity shares worth ₹5,00,000 by issuing and raising $15 \%$ perpetual debt of the same amount. Rate of tax may be taken as $30 \%$. After the capital restructuring and applying MM Model (with taxes), you are required to compute:
(i) Market value of J Ltd.
(ii) Cost of Equity $\left(\mathrm{K}_{\mathrm{e}}\right)$
(iii) Weighted average cost of capital (using market weights) and comment on it.

## Leverage

6. A firm has sales of $₹ 75,00,000$ variable cost is $56 \%$ and fixed cost is $₹ 6,00,000$. It has a debt of ₹ $45,00,000$ at $9 \%$ and equity of ₹ $55,00,000$. You are required to interpret:
(i) The firm's ROI?
(ii) Does it have favourable financial leverage?
(iii) If the firm belongs to an industry whose capital turnover is 3 , does it have a high or low capital turnover?
(iv) The operating, financial and combined leverages of the firm?
(v) If the sales is increased by $10 \%$ by what percentage EBIT will increase?
(vi) At what level of sales the EBT of the firm will be equal to zero?
(vii) If EBIT increases by $20 \%$, by what percentage EBT will increase?

## Capital Budgeting

7. Shiv Limited is thinking of replacing its existing machine by a new machine which would cost ₹ 60 lakhs. The company's current production is 80,000 units, and is expected to increase to $1,00,000$ units, if the new machine is bought. The selling price of the product would remain unchanged at ₹ 200 per unit. The following is the cost of producing one unit of product using both the existing and new machine:

|  |  |  |  |  | Unit cost (₹) |  |  |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: | :---: |

The existing machine has an accounting book value of ₹ $1,00,000$, and it has been fully depreciated for tax purpose. It is estimated that machine will be useful for 5 years. The supplier of the new machine has offered to accept the old machine for $₹ 2,50,000$. However, the market price of old machine today is ₹ $1,50,000$ and it is expected to be ₹ 35,000 after 5 years. The new machine has a life of 5 years and a salvage value of ₹ $2,50,000$ at the end of its economic life. Assume corporate Income tax rate at $40 \%$, and depreciation is charged on straight line basis for Income-tax purposes. Further assume that book profit is treated as ordinary income for tax purpose. The opportunity cost of capital of the Company is $15 \%$.
Required:
(i) Estimate net present value of the replacement decision.
(ii) Calculate the internal rate of return of the replacement decision.
(iii) Should Company go ahead with the replacement decision? Analyse.

## Management of Receivables (Debtors)

8. Tony Limited, manufacturer of Colour TV sets is considering the liberalization of existing credit terms to three of their large customers A, B and C. The credit period and likely quantity of TV sets that will be sold to the customers in addition to other sales are as follows:

## Quantity sold (No. of TV Sets)

| Credit Period <br> (Days) | A | B | C |
| :---: | :---: | :---: | :---: |
| 0 | 1,000 | 1,000 | - |
| 30 | 1,000 | 1,500 | - |
| 60 | 1,000 | 2,000 | 1,000 |
| 90 | 1,000 | 2,500 | 1,500 |

The selling price per TV set is ₹ 9,000 . The expected contribution is $20 \%$ of the selling price. The cost of carrying receivable averages $20 \%$ per annum.

You are required:-
(a) Compute the credit period to be allowed to each customer.
(Assume 360 days in a year for calculation purposes).
(b) Demonstrate the other problems the company might face in allowing the credit period as determined in (a) above?

## Financing of Working Capital

9. A company is considering its working capital investment and financial policies for the next year. Estimated fixed assets and current liabilities for the next year are ₹ 2.60 crores and ₹ 2.34 crores respectively. Estimated Sales and EBIT depend on current assets investment, particularly inventories and book-debts. The financial controller of the company is examining the following alternative Working Capital Policies:
(₹ Crores)

| Working Capital <br> Policy | Investment in Current <br> Assets | Estimated Sales | EBIT |
| :--- | :---: | :---: | :---: |
| Conservative | 4.50 | 12.30 | 1.23 |
| Moderate | 3.90 | 11.50 | 1.15 |
| Aggressive | 2.60 | 10.00 | 1.00 |

After evaluating the working capital policy, the Financial Controller has advised the adoption of the moderate working capital policy. The company is now examining the use of long-term and short-term borrowings for financing its assets. The company will use $₹ 2.50$ crores of the equity funds. The corporate tax rate is $35 \%$. The company is considering the following debt alternatives.
(₹ Crores)

| Financing Policy | Short-term Debt | Long-term Debt |
| :--- | :---: | :---: |
| Conservative | 0.54 | 1.12 |
| Moderate | 1.00 | 0.66 |
| Aggressive | 1.50 | 0.16 |
| Interest rate-Average | $12 \%$ | $16 \%$ |

You are required to calculate the following:
(i) Working Capital Investment for each policy:
(a) Net Working Capital position
(b) Rate of Return
(c) Current ratio
(ii) Financing for each policy:
(a) Net Working Capital position.
(b) Rate of Return on Shareholders' equity.
(c) Current ratio.

## Miscellaneous

10. (i) "The profit maximization is not an operationally feasible criterion." Identify.
(ii) Explain the principles of "Trading on equity".

## SUGGESTED HINTS/ANSWERS

1. $\mathrm{A}=\mathrm{P}\left(\frac{\mathrm{I}(1+\mathrm{I})^{\mathrm{n}}}{(1+\mathrm{I})^{\mathrm{n}}-1}\right)$

Where,
A $=$ Amount of Instalment
$\mathrm{P}=$ Principal amount of loan
I = Interest rate
$\mathrm{n}=$ Loan repayment period.
$A=30,00,000\left(\frac{0.14(1+0.14)^{10}}{(1+0.14)^{10}-1}\right)$
$A=30,00,000 \times \frac{0.14 \times 3.707}{2.707}$
$A=5,75,153$
Or
$A=\frac{P}{\text { PVIFA }_{n, 1}}$
$A=\frac{30,00,000}{\text { PVIFA }_{10,0.14}}=\frac{30,00,000}{5.216}=5,75,153$

$$

$K_{e}=\frac{4,72,500}{21,50,000}=0.219=21.98 \%$
(iii) WACC (on market value weight)

Cost of Debt (after tax) $=15 \%(1-0.3)=0.15(0.70)=0.105=10.5 \%$

| Components of Costs | Amount | Cost of Capital <br> $(\%)$ | Weight | WACC <br> $(\%)$ |

Comment: At present the company is all equity financed. So, $\mathrm{K}_{\mathrm{e}}=\mathrm{K}_{\mathrm{o}}$ i.e. $21 \%$. However,after restructuring, the $\mathrm{K}_{0}$ would be reduced to $19.80 \%$ and $\mathrm{K}_{\mathrm{e}}$ would increase from $21 \%$ to $21.98 \%$.

## 6. Income Statement

| Particulars | Amount (₹) |
| :--- | ---: |
| Sales | $75,00,000$ |
| Less: Variable cost (56\% of 75,00,000) | $(42,00,000)$ |
| Contribution | $33,00,000$ |
| Less: Fixed costs | $(6,00,000)$ |
| Earnings before interest and tax (EBIT) | $27,00,000$ |
| Less: Interest on debt @ 9\% on ₹ 45 lakhs) | $(4,05,000)$ |
| Earnings before tax (EBT) | $22,95,000$ |

(i) ROI $=\frac{\text { EBIT }}{\text { Capital employed }} \times 100=\frac{\text { EBIT }}{\text { Equity }+ \text { Debt }} \times 100$
$=\frac{27,00,000}{55,00,000+45,00,000} \times 100=27 \%$
(ROI is calculated on Capital Employed)
(ii) $\mathrm{ROI}=27 \%$ and Interest on debt is $9 \%$, hence, it has a favourable financial leverage.
(iii) Capital Turnover $=\frac{\text { Net Sales }}{\text { Capital }}$

Or $=\frac{\text { Net Sales }}{\text { Capital }}=\frac{75,00,000}{1,00,00,000}=0.75$
Which is very low as compared to industry average of 3 .
(iv) Calculation of Operating, Financial and Combined leverages
(a) Operating Leverage $=\frac{\text { Contribution }}{\text { EBIT }}=\frac{33,00,000}{27,00,000}=1.22$ (approx)
(b) Financial Leverage $=\frac{\text { EBIT }}{E B T} \quad=\frac{27,00,000}{22,95,000}=1.18$ (approx)
(c) Combined Leverage $=\frac{\text { Contribution }}{\text { EBT }} \quad=\frac{33,00,000}{22,95,000}=1.44$ (approx)

Or = Operating Leverage $\times$ Financial Leverage $=1.22 \times 1.18=1.44$ (approx)
(v) Operating leverage is 1.22 . So if sales is increased by $10 \%$. EBIT will be increased by $1.22 \times 10$ i.e. $12.20 \%$ (approx)
(vi) Since the combined Leverage is 1.44 , sales have to drop by $100 / 1.44$ i.e. $69.44 \%$ to bring EBT to Zero
Accordingly, New Sales $=₹ 75,00,000 \times(1-0.6944)$
$=₹ 75,00,000 \times 0.3056$
= ₹ 22,92,000 (approx)
Hence at ₹22,92,000 sales level EBT of the firm will be equal to Zero.
(vii) Financial leverage is 1.18 . So, if EBIT increases by $20 \%$ then EBT will increase by $1.18 \times 20=23.6 \%$ (approx)
7. (i) Net Cash Outlay of New Machine

Purchase Price
Less: Exchange value of old machine

$$
[2,50,000-0.4(2,50,000-0)] \quad 1,50,000
$$

₹ $60,00,000$
₹ $58,50,000$
Market Value of Old Machine: The old machine could be sold for ₹ $1,50,000$ in the market. Since the exchange value is more than the market value, this option is not attractive. This opportunity will be lost whether the old machine is retained or replaced. Thus, on incremental basis, it has no impact.
Depreciation base: Old machine has been fully depreciated for tax purpose.
Thus the depreciation base of the new machine will be its original cost i.e. ₹ 60,00,000.

Net Cash Flows: Unit cost includes depreciation and allocated overheads. Allocated overheads are allocated from corporate office therefore they are irrelevant. The depreciation tax shield may be computed separately. Excluding depreciation and
allocated overheads, unit costs can be calculated. The company will obtain additional revenue from additional 20,000 units sold.

Thus, after-tax saving, excluding depreciation, tax shield, would be
$=\{100,000(200-148)-80,000(200-173)\} \times(1-0.40)$
$=\{52,00,000-21,60,000\} \times 0.60$
$=₹ 18,24,000$
After adjusting depreciation tax shield and salvage value, net cash flows and net present value are estimated.

| 10 NPV | ₹ 1913.32 |  |  |  |  |  |

* Alternately Net Cash flows from operation can be calculated as follows:

Profit before depreciation and tax = ₹ 1,00,000 (200-148) - 80,000 (200-173)

$$
\begin{aligned}
& =₹ 52,00,000-21,60,000 \\
& =₹ 30,40,000
\end{aligned}
$$

So profit after depreciation and tax is ₹ $(30,40,000-11,50,000) \times(1-.40)$
= ₹ 11,34,000

So profit before depreciation and after tax is :
$₹ 11,34,000+11,50,000$ (Depreciation added back) $=22,84,000$

(iii) Advise: The Company should go ahead with replacement project, since it is positive NPV decision.
8. (a) In case of customer $A$, there is no increase in sales even if the credit is given. Hence comparative statement for $B \& C$ is given below:

| Particulars | Customer B |  |  |  | Customer C |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1. Credit period (days) | 0 | 30 | 60 | 90 | 0 | 30 | 60 | 90 |
| 2. Sales Units | 1,000 | 1,500 | 2,000 | 2,500 | - | - | 1,000 | 1,500 |
|  | ₹ in lakhs |  |  |  | ₹ in lakhs |  |  |  |
| 3. Sales Value | 90 | 135 | 180 | 225 | - | - | 90 | 135 |
| 4. Contribution at $20 \%$ (A) | 18 | 27 | 36 | 45 | - | - | 18 | 27 |
| 5. Receivables:- $\frac{\text { Credit Period } \times \text { Sales }}{360}$ | - | 11.25 | 30 | 56.25 | - | - | 15 | 33.75 |
| 6. Debtors at cost i.e. $80 \%$ of 11.25 | - | 9 | 24 | 45 | - | - | 12 | 27 |
| 7. Cost of carrying debtors at 20\% (B) | - | 1.8 | 4.8 | 9 | - | - | 2.4 | 5.4 |
| 8. Excess of contributions over cost of carrying debtors (A - B) | 18 | 25.2 | 31.2 | 36 | - | - | 15.6 | 21.6 |

The excess of contribution over cost of carrying Debtors is highest in case of credit period of 90 days in respect of both the customers $B$ and $C$. Hence, credit period of 90 days should be allowed to $B$ and $C$.
(b) Problem;-
(i) Customer A is taking 1000 TV sets whether credit is given or not. Customer C is taking 1000 TV sets at credit for 60 days. Hence A also may demand credit for 60 days compulsorily.
(ii) B will take 2500 TV sets at credit for 90 days whereas C would lift 1500 sets only. In such case B will demand further relaxation in credit period i.e. B may ask for 120 days credit.

10. (i) The profit maximisation is not an operationally feasible criterion." This statement is true because profit maximisation can be a short-term objective for any organisation and cannot be its sole objective. Profit maximization fails to serve as an operational criterion for maximizing the owner's economic welfare. It fails to provide an operationally feasible measure for ranking alternative courses of action in terms of their economic efficiency. It suffers from the following limitations:
(i) Vague term: The definition of the term profit is ambiguous. Does it mean short term or long term profit? Does it refer to profit before or after tax? Total profit or profit per share?
(ii) Timing of Return: The profit maximization objective does not make distinction between returns received in different time periods. It gives no consideration to the time value of money, and values benefits received today and benefits received after a period as the same.
(iii) It ignores the risk factor.
(iv) The term maximization is also vague.
(ii) The term trading on equity means debts are contracted and loans are raised mainly on the basis of equity capital. Those who provide debt have a limited share in the firm's earning and hence want to be protected in terms of earnings and values represented by equity capital. Since fixed charges do not vary with firms earnings before interest and tax, a magnified effect is produced on earning per share. Whether the leverage is favourable, in the sense, increase in earnings per share more proportionately to the increased earnings before interest and tax, depends on the profitability of investment proposal. If the rate of returns on investment exceeds their explicit cost, financial leverage is said to be positive.
